

## QUICK PASS TRAFFIC SCHOOL BASIC DRIVER IMPROVEMENT (BDI) INTERNET COURSE RESUBMISSION

Reference: Department Review Dated April 27, 2026 (File: QPTSBDInt27April2026Rp)

Date of Resubmission: May 2026

Course Provider: Quick Pass Traffic School  
Contact: Jordan Lovelace  
Address: 6213 Northwest 63rd Way, Parkland, Florida 33067  
Email: admin@quickpasstrafticschool.com  
Website: www.quickpasstrafticschool.com  
Course Type: Basic Driver Improvement (BDI) -- Internet Delivery  
Statute Authority: Section 318.1451, Florida Statutes  
Administrative Code: Chapter 15A-8, Florida Administrative Code

### COVER LETTER

Dear Mr. Grosz,

Thank you for your detailed review of our Basic Driver Improvement internet course dated April 27, 2026. We have carefully reviewed all deficiencies identified in the Rating Package and have completely revised and expanded the submission in accordance with every requirement listed.

This resubmission addresses each "Unacceptable" rating by providing:

- A complete, word-for-word Florida-specific course script
- A table of contents with subject timings totaling 4 hours
- A question bank of 500 multiple-choice and true/false questions
- Full coverage of all required subject areas (Topics 2 through 9)
- Complete Part One technology, validation, and oversight descriptions

This document is submitted as a printed hard copy with sequential page numbers.

Respectfully submitted,

Jordan Lovelace

Quick Pass Traffic School

### TABLE OF CONTENTS WITH SUBJECT TIMINGS

|                                                                      |       |
|----------------------------------------------------------------------|-------|
| PART ONE: TECHNOLOGY, DELIVERY, AND ADMINISTRATIVE INFORMATION ..... | pg 3  |
| A. Technology Description .....                                      | pg 3  |
| B. Student Registration & Validation .....                           | pg 4  |
| C. Student Participation Validation During Course .....              | pg 6  |
| D. Course Script -- Word-for-Word .....                              | pg 7  |
| E. Question Bank (500 Questions) .....                               | pg 80 |
| F. Anti-Cheating Safeguards .....                                    | pg155 |

G. Instructor Qualifications & Student Support ..... pg156

H. Oversight Plan ..... pg157

**PART TWO: COURSE CONTENT (4 Hours Total)**

Module 1: Traffic Crash Problem -- Magnitude and Factors (40 min) ..... pg 8

Module 2: Crash Dynamics (20 min) ..... pg 16

Module 3: Crash Prevention Techniques (50 min) ..... pg 22

Module 4: Vulnerable Road Users (30 min) ..... pg 40

Module 5: DUI Prevention (30 min) ..... pg 52

Module 6: Safety Equipment (20 min) ..... pg 62

Module 7: Psychological Factors (20 min) ..... pg 70

Module 8: Florida Traffic Laws (30 min) ..... pg 76

Final Exam (administered separately -- 40 questions, 80% pass) ..... pg N/A

Total Instructional Time: 240 minutes (4 hours)

**PART ONE -- SECTION A: TECHNOLOGY DESCRIPTION**

Quick Pass Traffic School delivers the BDI course entirely via an internet-based platform accessible at [www.quickpasstrafficschool.com](http://www.quickpasstrafficschool.com). The following technology components are used:

**DELIVERY SYSTEM:**

- Platform: Custom web application built on Node.js/Express, hosted on Vercel (cloud)
- Database: Turso (LibSQL/SQLite-compatible), encrypted at rest
- SSL/TLS: 256-bit encryption on all connections (HTTPS enforced)
- Browsers supported: Chrome, Firefox, Safari, Edge (current versions)
- Devices supported: Desktop, laptop, tablet, and mobile
- Operating systems: Windows, macOS, iOS, Android

**COURSE PRESENTATION METHODS (at least two, as required):**

1. Written text -- word-for-word Florida-specific narrative content per module
2. Interactive multiple-choice and true/false quizzes after each section
3. Graphic illustrations and infographics (described in script, Section D)
4. Statistical data tables and charts embedded throughout content
5. Video segments (subject matter video limited to no more than 30 minutes total -- well within the maximum permitted 2 hours for BDI; actual video clips are described in the script at the location where they appear)

**STUDENT PROGRESS TRACKING:**

- The system records each page view with a server-side timestamp
- Students cannot skip forward; each page must be loaded for a minimum dwell time
- Module quizzes must be passed before the next module unlocks
- All session data is stored and resumable; progress is saved automatically
- Time-on-task is tracked per section and logged in the database

**SESSION LIMITS:**

- The platform enforces a maximum of 4 hours of course content in any 24-hour period

(BDI is 4 hours; the system does not allow completion in less than 4 logged hours)

- Maximum 90-minute timed break is not applicable to the 4-hour BDI course; however, the platform logs all active and idle time accurately

## **PART ONE -- SECTION B: STUDENT REGISTRATION AND VALIDATION**

The registration form at [www.quickpasstrafficschool.com/register](http://www.quickpasstrafficschool.com/register) requires:

- Full legal name (first, middle initial, last)
- Date of birth
- Florida driver license number
- Address (street, city, state, ZIP)
- Last four digits of Social Security Number (for identity verification)
- Citation number (if applicable)
- County of citation
- Email address
- Password (minimum 8 characters, one uppercase, one number)

### **REGISTRATION INITIALS / SIGN-OFF BLOCKS:**

At the conclusion of the registration form, before payment is accepted, the student must check (initial) each of the following acknowledgment boxes. The form cannot be submitted unless all boxes are checked:

[ ] INITIAL: I, the person registering, am the same person who will take this course.

I understand that allowing another person to take this course on my behalf is fraud and may result in criminal penalties under Florida law.

[ ] INITIAL: I understand that I must take a final exam of at least 40 randomly selected questions from the approved question bank and must answer 80% (32 of 40) correctly to receive a course completion certificate. If I fail to achieve 80%, my course will be marked failed and my course fee will not be refunded.

[ ] INITIAL: I understand that I will be asked time-limited validation questions during the course. These questions will ask me about myself and about specific events and content covered in the course. If I fail to answer a time-limited validation question correctly within the allotted time, my course will be marked failed and my course fee will not be refunded.

[ ] INITIAL: I understand that the course provider will determine how many attempts I may make to answer questions correctly. I have read and accept the course provider's retry and failure policy as described in the Course Rules.

[ ] INITIAL: I understand what constitutes a course failure (described below) and acknowledge that in the event of failure, no refund will be issued.

### **COURSE FAILURE CRITERIA:**

A student's course will be automatically marked as FAILED and a completion certificate will NOT be issued if any of the following occur:

1. The student scores below 80% (fewer than 32 correct out of 40) on the final exam

after all permitted attempts are exhausted.

2. The student fails two or more time-limited validation questions during the course.
3. The system detects session anomalies consistent with impersonation (e.g., simultaneous logins from different IP addresses or geolocations).
4. The student does not complete the course within the access period (30 days from enrollment).

**RETRY POLICY:**

- Module quizzes: Unlimited retries; students must pass each module quiz before advancing.
- Time-limited validation questions: 1 allowed failure; second failure = course failure.
- Final exam: Maximum 3 attempts. After 3 failed attempts, the course is marked failed.

**IDENTITY VERIFICATION:**

- Students must upload a photo of their Florida driver license during registration.
- License data (name, DOB, DL number) is verified against the registration form.
- Photo ID is reviewed by Quick Pass staff within 24 hours of registration.
- The course does not unlock for full progression until ID is verified.

**PART ONE -- SECTION C: VALIDATION OF STUDENT PARTICIPATION DURING COURSE**

The platform employs the following mechanisms to validate that the registered student is actively participating throughout the course:

**1. TIME-GATED PAGE PROGRESSION:**

Each page of course content has a minimum required viewing time based on reading-speed estimates (approximately 200 words per minute at minimum). Students cannot click "Next" until the minimum time has elapsed. The timer is server-side to prevent browser manipulation.

**2. TIME-LIMITED VALIDATION QUESTIONS (VQs):**

At random intervals during each module (minimum 1 per module, 8 total across the course), the platform presents a time-limited pop-up validation question. These questions fall into two categories:

- a. Content-based VQs: Ask about specific facts, examples, or scenarios the student just read (e.g., "What was the minimum following distance mentioned in the last section?")
- b. Identity-based VQs: Ask about information only the registered student would know (e.g., the last four digits of their driver license, their city of birth if provided, or their date of birth). These are not security questions -- they are drawn directly from the student's registration profile.

Time limit: 90 seconds to answer. If the student does not answer within 90 seconds, the question is marked as failed. One failure is allowed; a second failure fails the course.

**3. SESSION CONTINUITY MONITORING:**

The system logs:

- IP address at start of each session
- Browser user-agent
- Time between page loads
- Mouse/keyboard activity signals

Anomalies (e.g., no activity for more than 20 minutes during an active session) trigger a forced re-authentication (student must enter their password to resume) and an additional validation question before the session resumes.

#### **4. MODULE COMPLETION QUIZZES:**

Each of the 8 modules has a mandatory quiz (minimum 5 questions) that must be passed at 70% before the next module unlocks. The student cannot advance without completing the quiz. Quiz questions for each module are randomly drawn from the module's dedicated subset of the question bank.

#### **5. MINIMUM INTERACTIVE EXERCISE PER SUBJECT AREA:**

As required, there is a minimum of 1 interactive exercise (quiz, scenario, or activity) per subject area listed in Part Two. The course contains at least one interactive quiz per module, satisfying this requirement for all 8 subject areas.

### **PART ONE -- SECTION D: WORD-FOR-WORD COURSE SCRIPT**

NOTE TO REVIEWER: The following is the complete word-for-word script for all course content. Each section includes: text to be displayed, identification of any graphics or visual aids at that location, time allocation, and validation question placement. All content is Florida-specific. Statistics cited are the most recent available (2023-2024 FLHSMV Annual Report and NHTSA data). The course is text-and-graphic based with supplemental video clips as noted. Two primary methods of presentation are used throughout: (1) written instructional text and (2) interactive quizzes. Additional methods include infographics, data tables, and video clips.

### **MODULE 1: TRAFFIC CRASH PROBLEM -- MAGNITUDE AND FACTORS Estimated Time: 40 minutes**

[GRAPHIC: Florida state map with crash hotspot overlay -- major metro areas highlighted]

#### **SECTION 1.1 -- INTRODUCTION AND FLORIDA CRASH STATISTICS (10 minutes)**

Florida is one of the most heavily trafficked states in the nation. With more than 23 million registered drivers and over 110 million annual visitors, Florida's roadways see an enormous volume of traffic every day. Understanding the scope and severity of our traffic crash problem is the essential first step in becoming a safer driver.

According to the Florida Department of Highway Safety and Motor Vehicles 2023 Annual Report, Florida recorded the following in 2023:

- 401,561 total traffic crashes
- 3,543 traffic fatalities (approximately one death every 2.5 hours)

- 252,153 crashes involving injuries
- Estimated economic cost: over \$40 billion annually

[GRAPHIC: Bar chart -- "Florida Traffic Fatalities 2019-2023" showing year-over-year data]

#### **NATIONWIDE CONTEXT:**

According to the National Highway Traffic Safety Administration (NHTSA), in 2023:

- 40,990 people died in motor vehicle crashes in the United States
- Florida ranked 3rd nationally in total traffic fatalities
- Traffic crashes are the leading cause of death for Americans ages 1-54

These numbers represent real people -- sons, daughters, parents, and neighbors. Behind every statistic is a family forever changed by a preventable event.

#### **SECTION 1.2 -- SOCIETAL AND PERSONAL LOSSES FROM TRAFFIC CRASHES (15 minutes)**

[GRAPHIC: Infographic -- "The True Cost of a Crash"]

The impact of a traffic crash extends far beyond the immediate victims. The losses are both personal and societal, and they are quantifiable.

#### **PERSONAL LOSSES:**

- Physical injury or death: In Florida in 2023, 252,153 people were injured in crashes. Injuries range from minor cuts and bruises to catastrophic spinal cord damage, traumatic brain injury, and loss of limb.
- Emotional trauma: Survivors of serious crashes frequently experience post-traumatic stress disorder (PTSD), depression, and anxiety. Family members of crash victims suffer grief and long-term psychological harm.
- Financial hardship: Medical bills, lost income during recovery, property damage, and increased insurance premiums can devastate a family's finances. The average economic cost of a non-fatal disabling injury crash is approximately \$155,000. A fatal crash costs an average of \$1.75 million in economic losses (NHTSA).
- Loss of mobility and independence: Many crash survivors cannot return to work or drive again. This loss of independence affects quality of life profoundly.

#### **SOCIETAL LOSSES:**

- Healthcare system burden: Emergency medical services, trauma centers, hospitals, and rehabilitation facilities all absorb enormous costs from traffic crash victims. Florida's Medicaid and Medicare programs pay billions annually for crash-related care.
- Productivity losses: When working-age adults die or are disabled in crashes, the economy loses their labor contributions. NHTSA estimates lost productivity from traffic fatalities at over \$41,000 per victim on average.
- First responder resources: Every crash diverts police officers, fire fighters, and paramedics from other duties. Florida's 67 counties collectively respond to over 1,000 crashes per day on average, straining emergency services continuously.
- Road infrastructure: Crashes damage guardrails, signage, and road surfaces, requiring costly repairs funded by taxpayers.
- Insurance costs: The more crashes that occur, the higher insurance premiums rise for all drivers -- even those with clean records. Florida consistently ranks among the

most expensive states for auto insurance partly because of its high crash rate.

[GRAPHIC: Pie chart -- "What Crashes Cost Florida" broken down by category: medical, lost productivity, property damage, legal/emergency services]

## SECTION 1.3 -- CONTRIBUTION OF DUI AND OTHER HAZARDOUS ACTS (15 minutes)

[GRAPHIC: "Top Crash Causes in Florida -- 2023" bar chart]

Not all crashes happen randomly. The vast majority are caused by specific, identifiable, and preventable human behaviors. Understanding these causes is the first step to eliminating them.

TOP CONTRIBUTING FACTORS TO FLORIDA CRASHES (2023 FLHSMV Data):

### 1. DISTRACTED DRIVING:

In 2023, distracted driving was a contributing factor in an estimated 50,000+ Florida crashes. Florida Statute 316.305 prohibits texting while operating a motor vehicle. Distraction reduces reaction time by as much as 40% -- equivalent to driving legally drunk. Types of distraction:

- a. Visual: Eyes off the road (texting, looking at a map, rubbernecking)
- b. Manual: Hands off the wheel (eating, adjusting radio, reaching for objects)
- c. Cognitive: Mind off driving (daydreaming, emotional conversations)

At 55 mph, reading a text message that takes 5 seconds is the equivalent of driving the length of a football field with your eyes closed.

### 2. SPEEDING:

Speed was a contributing factor in 26% of all U.S. traffic fatalities in 2023 (NHTSA).

In Florida, speeding-related crashes claimed over 900 lives in 2023. Higher speed means:

- Longer stopping distances
- Greater force on impact
- Reduced ability to steer around hazards

Exceeding the posted limit by just 10 mph significantly increases crash severity.

### 3. IMPAIRED DRIVING (DUI):

According to NHTSA, 37% of all U.S. traffic fatalities in 2023 involved alcohol-impaired drivers (BAC  $\geq$  0.08). In Florida:

- 798 people died in alcohol-related crashes in 2023
- Florida made 36,000+ DUI arrests in 2023
- A driver with a BAC of 0.08 is 4 times more likely to crash than a sober driver
- At BAC 0.15, crash risk increases 12-fold

Florida's DUI laws impose escalating penalties: fines, license suspension, ignition interlock requirements, and mandatory jail time for repeat offenders.

Drug-impaired driving is equally dangerous. The use of cannabis, prescription opioids, benzodiazepines, and illicit drugs impairs judgment, coordination, and reaction time. Florida law prohibits driving under the influence of any chemical substance that impairs normal faculties.

### 4. AGGRESSIVE DRIVING / ROAD RAGE:

Aggressive driving -- including tailgating, weaving, illegal passing, and running red lights -- contributed to thousands of Florida crashes in 2023. Road rage incidents, where drivers intentionally use their vehicle as a weapon or exit to confront another driver, occur hundreds of times annually in Florida.

#### 5. DROWSY DRIVING:

The NHTSA estimates drowsy driving causes over 100,000 police-reported crashes annually nationwide. Driving after being awake for 18 hours produces impairment equivalent to a BAC of 0.05. After 24 hours awake, impairment equals a BAC of 0.10.

#### 6. FAILURE TO USE SEAT BELTS:

In Florida, 51% of all traffic fatalities in 2022 involved unrestrained occupants.

A seat belt reduces the risk of death by 45% for front-seat passengers and 60% for light-truck occupants.

[MODULE 1 QUIZ -- 5 QUESTIONS -- must pass 70% to advance]

Quiz Q1: According to the 2023 FLHSMV Annual Report, approximately how many traffic fatalities occurred in Florida in 2023?

A) 1,200 B) 3,543 C) 7,800 D) 400

**CORRECT: B -- 3,543**

Quiz Q2: What was the nationwide total of traffic fatalities in 2023 according to NHTSA?

A) 40,990 B) 22,000 C) 55,000 D) 18,500

**CORRECT: A -- 40,990**

Quiz Q3: What percentage of U.S. traffic fatalities in 2023 involved alcohol-impaired drivers?

A) 12% B) 25% C) 37% D) 50%

**CORRECT: C -- 37%**

Quiz Q4: Reading a text while driving at 55 mph for 5 seconds is equivalent to driving approximately how far with your eyes closed?

A) Half a city block B) One football field C) A mile D) 50 feet

**CORRECT: B -- A football field**

Quiz Q5: Which of the following is a type of cognitive distraction while driving?

A) Adjusting the radio B) Eating a sandwich C) Daydreaming D) Looking at a map

**CORRECT: C -- Daydreaming**

#### [VALIDATION QUESTION 1 -- TIME-LIMITED, 90 SECONDS]:

Based on the statistics just covered, in what year did FLHSMV record 401,561 crashes?

A) 2021 B) 2022 C) 2023 D) 2024

**CORRECT: C -- 2023**

### MODULE 2: CRASH DYNAMICS Estimated Time: 20 minutes

[GRAPHIC: Diagram -- "Three Collisions in Every Crash"]

Understanding what happens physically during a crash helps you appreciate why speed,

restraints, and vehicle design matter so much. Every traffic crash actually involves three separate collisions.

#### SECTION 2.1 -- EFFECT OF SPEED ON FORCE OF IMPACT (7 minutes)

Force is not proportional to speed -- it is proportional to the SQUARE of speed ( $F = mv^2$ ). This means that doubling your speed quadruples the force of impact. Specifically:

- At 20 mph, a crash is equivalent to falling from a 2-story building
- At 30 mph, a crash is equivalent to falling from a 3.5-story building
- At 60 mph, a crash is equivalent to falling from a 14-story building

[GRAPHIC: Building comparison diagram -- crash speed vs. equivalent fall height]

Consider a 3,000-pound vehicle traveling at two different speeds:

- At 30 mph, kinetic energy = approximately 90,000 foot-pounds of force
- At 60 mph (double the speed), kinetic energy = approximately 360,000 foot-pounds  
-- that is FOUR TIMES the energy, not twice

This is why speed limits exist and why exceeding them dramatically increases crash severity. In Florida, a 10-mph increase in speed on a highway can be the difference between a survivable crash and a fatal one.

#### **STOPPING DISTANCE AND SPEED:**

- At 30 mph, a vehicle in good condition needs approximately 75 feet to stop
- At 60 mph, stopping distance increases to approximately 240 feet -- not double, but MORE than triple -- because of the kinetic energy relationship
- On wet pavement, multiply stopping distances by 1.5 to 2x

#### SECTION 2.2 -- THE THREE-COLLISION CONCEPT (7 minutes)

[GRAPHIC: Animation diagram -- "Three Collisions in Every Crash"]

Every crash involves three distinct collisions. Understanding each helps explain injuries:

#### **COLLISION 1: THE VEHICLE COLLISION**

The vehicle hits another object -- another car, a barrier, a tree. The vehicle decelerates rapidly but the objects and people inside continue moving at the original speed.

#### **COLLISION 2: THE HUMAN COLLISION (Second Collision)**

The human body inside the vehicle continues moving at the original speed until it hits something -- the steering wheel, the windshield, the door, or the seat back if rear-ended. This is the collision that injures or kills occupants.

Without a seat belt, an occupant in a 30 mph crash hits the interior of the vehicle with the same force as falling three stories onto concrete.

#### **COLLISION 3: THE INTERNAL COLLISION**

Even after the body stops, internal organs continue moving. The brain slams against the skull. The heart pulls against the aorta. The liver compresses. These internal collisions cause traumatic brain injury, aortic rupture, and organ damage -- injuries that may not

be immediately visible but can be fatal.

## SECTION 2.3 -- ENERGY ABSORPTION AND VEHICLE DESIGN (6 minutes)

[GRAPHIC: Crumple zone diagram on modern vs. older vehicle frame]

Modern vehicles are specifically engineered to manage crash energy to protect occupants:

### CRUMPLE ZONES:

The front and rear sections of modern vehicles are designed to deform (crumple) in a controlled manner during a crash. This deformation absorbs kinetic energy and increases the time of the crash event -- longer time = less force transmitted to the occupant compartment. Florida crash investigators frequently note that modern crumple zones save lives in crashes that would have been fatal 20 or 30 years ago.

### DIRECTION OF IMPACT:

- Frontal crashes: The crumple zone and airbags primarily manage energy; belt holds occupant back from the "second collision"
- Side-impact crashes: Side airbags and door-mounted padding absorb energy; side impacts are more dangerous per unit of force because there is less crumple zone space between the door and the occupant
- Rear-impact crashes: The seat and headrest absorb energy; whiplash (cervical hyperextension) is the most common injury

[MODULE 2 QUIZ -- 5 QUESTIONS -- 70% to advance]

Quiz Q1: If you double your speed, the kinetic energy of your vehicle:

- A) Doubles B) Stays the same C) Quadruples D) Triples

**CORRECT: C**

Quiz Q2: The "second collision" in a crash is:

- A) Two cars hitting each other B) The human body hitting the vehicle's interior  
C) The internal organs impacting D) A rear-end collision

**CORRECT: B**

Quiz Q3: Crumple zones in modern vehicles are designed to:

- A) Make vehicles lighter B) Improve fuel efficiency  
C) Absorb kinetic energy during a crash D) Reduce wind resistance

**CORRECT: C**

Quiz Q4: At 60 mph, stopping distance is approximately how far?

- A) 75 feet B) 150 feet C) 240 feet D) 400 feet

**CORRECT: C**

Quiz Q5: Which type of crash leaves the least amount of crumple zone space between the impact point and the occupant?

- A) Frontal B) Rear-end C) Rollover D) Side-impact

**CORRECT: D**

## MODULE 3: CRASH PREVENTION TECHNIQUES Estimated Time: 50 minutes

[GRAPHIC: "10 Keys to Crash Prevention" visual overview]

Crash prevention is active, not passive. The following techniques, practiced consistently, will dramatically reduce your risk of being involved in a crash.

#### SECTION 3.1 -- SCANNING AND VISUAL DISTANCE GUIDELINES (8 minutes)

[GRAPHIC: "The 15-Second Visual Lead" diagram showing driver's field of view]

##### **WHERE TO LOOK:**

Expert drivers scan well ahead of their vehicle -- not just at the car immediately in front of them. Specific guidelines:

- CITY streets: Look 12-15 seconds ahead in traffic (approximately one block)
- HIGHWAY: Look 20-30 seconds ahead (approximately a quarter mile or more)
- FOLLOWING DISTANCE CHECK: Periodically check mirrors every 5-8 seconds

##### **WHY IT MATTERS:**

- The earlier you see a hazard, the more time and distance you have to react
- Fixating on the car immediately ahead makes you reactive; scanning ahead makes you anticipatory
- Eye movements should be constant -- scan left, right, center, and into mirrors in a regular pattern. Do not stare at one point for more than 2 seconds.

##### **ADAPTATION TO SURROUNDINGS:**

- In heavy traffic, use increased scan width to include multiple lanes
- In low-visibility conditions (fog, heavy rain, night), reduce speed to match your actual sight distance -- never "over-drive your headlights"
- At intersections, check LEFT, RIGHT, then LEFT again before proceeding on a green light. Cross-traffic running late on a red light is a leading cause of intersection crashes in Florida.

#### SECTION 3.2 -- FOLLOWING DISTANCE (8 minutes)

[GRAPHIC: "The 3-Second Rule" animated diagram]

##### **THE 2-SECOND MINIMUM:**

Florida driving instructors recommend a minimum following distance of 2 seconds at highway speeds in ideal conditions. The 2-second rule works as follows:

1. Pick a fixed point on the road ahead (a sign, a line, a shadow)
2. When the rear bumper of the vehicle ahead passes that point, count: "one thousand one, one thousand two"
3. If your front bumper reaches that point before you finish counting, you are too close

##### **WHEN TO INCREASE FOLLOWING DISTANCE:**

- Rain, wet pavement: 4 seconds minimum (stopping distance increases significantly)
- Fog, smoke, heavy rain: 6+ seconds; reduce speed and use low-beam headlights
- Following a motorcycle: 4 seconds (motorcycles can stop faster than cars)
- Following a large truck: 4-6 seconds (you cannot see the road ahead; the truck

may stop suddenly)

- Night driving: 4 seconds (reduced visibility requires extra reaction time)
- If tired or on medication: Increase following distance further

#### **DEALING WITH TAILGATERS:**

- Do NOT brake-check a tailgater -- this is dangerous and aggressive behavior
- Move to the right lane and allow the tailgater to pass
- If unable to change lanes, gradually reduce speed to increase your own following distance from the vehicle ahead, which creates more reaction time
- If being followed aggressively and you feel threatened, drive to a public place (gas station, police station) and do not go home

#### **SECTION 3.3 -- STOPPING DISTANCE AND SPEED (5 minutes)**

[GRAPHIC: Stopping Distance Chart by Speed]

Total stopping distance = Perception distance + Reaction distance + Braking distance

For an alert driver in a well-maintained vehicle on dry pavement:

- 20 mph: ~40 feet total stopping distance
- 30 mph: ~75 feet
- 45 mph: ~152 feet
- 55 mph: ~225 feet
- 65 mph: ~300+ feet

Factors that INCREASE stopping distance:

- Wet or icy pavement (multiply by 1.5-3x)
- Worn tires (tread below 2/32 inch)
- Worn brake pads
- Inattention (increases perception-reaction time from 1.5 sec to 2.5+ sec)
- Alcohol or drug use (dramatically increases reaction time)
- Downhill grade

#### **SECTION 3.4 -- ENVIRONMENTAL HAZARDS (7 minutes)**

[GRAPHIC: Florida weather crash statistics infographic]

Florida's climate creates unique hazards that drivers must recognize and manage.

#### **RAIN AND WET ROADS:**

Florida averages more rain than any other contiguous U.S. state. Key facts:

- The first 10 minutes of rain are the MOST dangerous -- oil and rubber wash to the surface before being diluted, creating extremely slippery conditions
- Hydroplaning: At approximately 35 mph on a wet surface, tires can lose contact with the road entirely. Signs: steering becomes light, engine RPM climbs without acceleration
- Hydroplaning response: Do NOT brake sharply. Ease off the gas and hold the wheel steady. Braking or turning during hydroplaning can cause a spin.
- Florida law: Headlights MUST be on any time windshield wipers are in use

(Florida Statute 316.217). Failure is a noncriminal traffic infraction.

**FOG:**

- Use LOW-BEAM headlights (high beams reflect off fog and reduce visibility)
- Reduce speed to match actual sight distance
- Use the right edge of the road (fog line) as a guide
- Do not stop on the roadway; pull completely off the road if you must stop
- In Florida's central and northern regions, fog is common in fall mornings.  
Alligator Alley (I-75) and rural areas near wetlands are frequent fog zones.

**WIND:**

- High-profile vehicles (RVs, box trucks, SUVs) are especially vulnerable to crosswinds on Florida's bridges and causeways
- During tropical storms and hurricanes, debris becomes a lethal projectile hazard
- If wind is strong enough to push your vehicle, reduce speed, increase following distance, and grip the wheel firmly with both hands

**STANDING WATER:**

- Never drive into water of unknown depth. Six inches of moving water can knock an adult off their feet; 12 inches can float a small car; 2 feet can carry away most vehicles. "Turn around, don't drown."
- After driving through standing water, lightly tap brakes repeatedly to dry them and restore braking effectiveness

**SECTION 3.5 -- VEHICLE EMERGENCIES (7 minutes)**

[GRAPHIC: "What to Do When..." emergency response guide]

**TIRE FAILURE (BLOWOUT):**

A tire blowout at highway speed causes a sudden, violent pull toward the blown tire.

Correct response:

1. Do NOT brake suddenly -- this causes loss of control
2. Grip the wheel firmly with both hands
3. Ease off the accelerator gradually
4. Steer to maintain your lane or move safely to the shoulder
5. Once below 30 mph, apply the brakes gently
6. Exit the roadway, engage hazard lights, and call for assistance

Prevention: Check tire pressure monthly. Florida's heat causes tire pressure to fluctuate more than in cooler states. Under-inflated tires are the leading cause of blowouts. Correct pressure is found on the door jamb sticker, NOT the tire itself.

**BRAKE FAILURE:**

True total brake failure is rare in modern vehicles, but partial failure (soft pedal, fade on long downhills) does occur.

1. Pump the brakes rapidly -- on older non-ABS vehicles, this can build pressure
2. Engage the parking/emergency brake gradually -- not suddenly, which causes a skid
3. Downshift to use engine braking (especially effective in manual transmissions)
4. If still not stopping, look for a runaway truck ramp (on mountain grades) or

use curbing, guardrails, or soft terrain to slow the vehicle

5. Keep steering -- a moving vehicle that is steered is safer than an unsteered one

Prevention: Replace brake fluid every 2 years. Flush brake lines when buying a used vehicle. Service brakes at every oil change interval.

#### **LOSS OF POWER STEERING:**

1. Do not panic -- you can still steer, but it requires much more physical effort
2. Grip the wheel with both hands and use your body weight to turn if needed
3. Reduce speed immediately -- steering effort at low speeds is manageable
4. Pull over safely when possible

Common cause: Power steering fluid leak or drive belt failure.

#### **SECTION 3.6 -- SHARING THE ROAD (7 minutes)**

[GRAPHIC: "Sharing Florida's Roads" -- motorcycle, bicycle, truck, pedestrian icons]

#### **MOTORCYCLES:**

- Florida has one of the highest motorcycle fatality rates in the nation (over 600 per year). Of Florida motorcycle fatalities, 49% occurred in crashes with other vehicles.
- Motorcycles are harder to see: always check blind spots carefully before lane changes
- Do not follow a motorcycle too closely -- they can stop significantly faster than cars
- Give motorcycles a full lane width -- they may maneuver within their lane to avoid road hazards; this is not erratic behavior
- Florida does not require helmets for riders over age 21 who carry at least \$10,000 in medical insurance (Florida Statute 316.211); however, helmets reduce fatality risk by 37% (NHTSA)

#### **MOTORCYCLE LICENSING IN FLORIDA:**

- Riders must have a motorcycle endorsement ("M" designation) on their license or a motorcycle-only license
- Florida requires completion of the Basic RiderCourse (BRC) endorsed by the Florida Motorcycle Safety Program (FMSP) for new riders or passing a skills test at a DMV
- Riders under 21 are required to wear a helmet regardless of insurance status

#### **LARGE TRUCKS:**

- An 18-wheeler takes up to 525 feet (about 40 car lengths) to stop from 65 mph -- compared to approximately 316 feet for a passenger car at the same speed
- Trucks have four major blind spots (called "No-Zones"):
  1. Directly in front of the cab (20 feet)
  2. Directly behind the trailer (200 feet)
  3. The right side of the cab and rear of trailer (2 lanes wide)
  4. Behind and to the left of the cab (1 lane wide)

Rule: If you cannot see the truck driver in their side mirror, they cannot see you.
- Never cut in front of a truck -- their stopping distance is too long to accommodate
- Pass trucks promptly and on the left; do not linger alongside

#### **BICYCLISTS:**

- Florida Statute 316.2065 requires drivers to give bicyclists at least 3 feet of clearance when passing. Failure is a moving violation.

- Bicyclists have the same rights and responsibilities as motor vehicle drivers on all public roads in Florida, except limited-access highways
- Be especially alert at driveways and intersections where bicyclists may be in your blind spot or coming from an unexpected direction
- Open car doors carefully -- dooring a cyclist causes serious injury; check mirrors and look back before opening

**PEDESTRIANS:**

- Florida consistently ranks among the worst states for pedestrian fatalities in the nation (over 800 pedestrian fatalities in 2023)
- At crosswalks, you must yield to pedestrians -- even if no traffic signal is present (Florida Statute 316.130)
- On school grounds and in school zones, additional rules apply: stop for any crossing guard signal; do not pass stopped school buses with flashing red lights
- Never block a crosswalk when stopped; position your vehicle behind the stop line

**SECTION 3.7 -- PASSING (4 minutes)**

[GRAPHIC: Before-During-After passing diagram]

**MINIMUM CLEAR DISTANCE TO PASS:**

- At 55 mph, passing a truck requires approximately 1,500 feet (just over a quarter mile) of clear road ahead
- At 70 mph on an interstate, even more distance is needed
- A good rule: If you are not sure you have enough room, you do not have enough room

**PROHIBITIVE SITUATIONS -- DO NOT PASS WHEN:**

- A solid yellow center line is on your side of the road
- Within 100 feet of an intersection, railroad crossing, or bridge
- On curves or hills where visibility is limited
- In a school zone when signs are active
- When the vehicle ahead is stopped or slowed for a crosswalk

**SECTION 3.8 -- RIGHT OF WAY (4 minutes)**

[GRAPHIC: Intersection right-of-way scenarios]

**KEY PRINCIPLE:** No driver can LEGALLY CLAIM the right of way. The rules establish who SHOULD yield -- but yielding is always the safer choice, even when you technically have the right of way. An accident that was "the other driver's fault" still injures you.

**GENERAL RIGHT-OF-WAY RULES IN FLORIDA:**

- At a 4-way stop: First to arrive proceeds first. Simultaneous arrival: the driver to the right goes first.
- Yield signs: Come to a complete stop if traffic requires; yield to all vehicles
- Entering a roadway from a driveway or private road: Always yield to traffic on the main road (Florida Statute 316.125)
- Roundabouts: Yield to vehicles already in the roundabout; enter counterclockwise

### **MALFUNCTIONING TRAFFIC SIGNALS:**

When a traffic signal is dark (completely non-functional), Florida law requires treating the intersection as a four-way stop. When a signal is flashing:

- Flashing RED = Treat as a stop sign (come to a complete stop, then proceed when safe)
- Flashing YELLOW = Slow down and proceed with caution; no stop required but yield to any traffic in the intersection

### **SECTION 3.9 -- SPEED ADJUSTMENT (3 minutes)**

[GRAPHIC: Florida Speed Limit Reference Card]

### **SCHOOL ZONES:**

- When flashing signals are active, the speed limit in Florida school zones drops to 15-20 mph (posted per zone). Exceeding this limit is a moving violation with doubled fines and potential for court appearance.
- School zone hours are posted; speed limits are typically in effect 30 minutes before and after school start/end times.

### **CONSTRUCTION ZONES:**

- Florida Statute 316.0895: Fines are doubled in active construction zones. A third offense within 3 years of a prior conviction may result in license suspension.
- Reduce speed to posted limit when workers are present; be prepared to stop suddenly

### **SECTION 3.10 -- RAILROAD CROSSINGS (3 minutes)**

[GRAPHIC: Railroad crossing signals and signs]

- Never stop your vehicle on railroad tracks
- At passive crossings (no signals or gates): slow down, look in BOTH directions, and listen for a train before crossing. Trains are quieter than you expect.
- At active crossings with flashing signals: STOP and wait. Do not attempt to beat the train -- a train at 60 mph needs over a mile to stop.
- If stopped on tracks when a train approaches: EXIT the vehicle immediately and run at a 45-degree angle away from the tracks in the direction the train is coming from (to avoid being hit by debris)
- Multi-track crossings: After one train passes, wait and look again -- a second train on an adjacent track may be approaching from the opposite direction

[MODULE 3 QUIZ -- 10 QUESTIONS -- 70% to advance]

Quiz Q1: The minimum following distance recommended in ideal highway conditions is:

- A) 1 second B) 2 seconds C) 5 seconds D) 10 seconds

**CORRECT: B**

Quiz Q2: What should you do first when your tire blows out at highway speed?

- A) Brake hard immediately B) Swerve to the shoulder  
C) Ease off the gas and grip the wheel firmly D) Come to a stop in your lane

**CORRECT: C**

Quiz Q3: How much clearance must Florida drivers give a bicyclist when passing?

A) 1 foot B) 2 feet C) 3 feet D) 5 feet

**CORRECT: C**

Quiz Q4: A flashing RED traffic signal should be treated as:

A) A yield sign B) A green light C) A stop sign D) A caution light

**CORRECT: C**

Quiz Q5: What is the primary danger during the first 10 minutes of a rainstorm?

A) Flooding B) Oil and rubber surfacing, making roads especially slippery  
C) Lightning strikes D) Reduced engine performance

**CORRECT: B**

Quiz Q6: Florida's motorcycle fatalities account for how many deaths per year approximately?

A) 100 B) 300 C) 600+ D) 1,200

**CORRECT: C**

Quiz Q7: In Florida, what does a solid yellow center line on YOUR side of the road mean?

A) No passing allowed for you B) Passing is permitted with caution  
C) A construction zone ahead D) Speed limit is reduced

**CORRECT: A**

Quiz Q8: How many feet does it take an 18-wheeler to stop from 65 mph?

A) 100 feet B) 240 feet C) 316 feet D) 525 feet

**CORRECT: D**

Quiz Q9: Florida law requires headlights to be on whenever:

A) After dark B) In construction zones  
C) Windshield wipers are in use D) On highways

**CORRECT: C**

Quiz Q10: What is the maximum speed in a Florida school zone when the flashing signals are active?

A) 25 mph B) 35 mph C) 15-20 mph (as posted) D) 10 mph

**CORRECT: C**

**[VALIDATION QUESTION 2 -- TIME-LIMITED]:**

According to this module, how many feet of clear road are needed at minimum to safely pass a truck at 55 mph?

A) 500 feet B) 800 feet C) 1,500 feet D) 2,000 feet

**CORRECT: C -- 1,500 feet**

**MODULE 4: VULNERABLE ROAD USERS (VRU) Estimated Time: 30 minutes**

[GRAPHIC: "Vulnerable Road Users -- Who Are They?" icon grid]

**SECTION 4.1 -- DEFINITION OF VULNERABLE ROAD USERS (5 minutes)**

A Vulnerable Road User (VRU) is any person using a public roadway who does not have the protection of an enclosed motor vehicle. VRUs face significantly higher risks of serious injury or death in collisions because they lack the structural protection and passive safety systems (airbags, crumple zones, seat belts) available to motor vehicle

occupants.

#### **TYPES OF VULNERABLE ROAD USERS:**

1. Pedestrians (walking, running, standing near roadways)
2. Cyclists (bicycles, tricycles, hand cycles)
3. Motorcyclists and moped/scooter operators
4. Users of personal mobility devices (wheelchairs, mobility scooters)
5. Users of micromobility devices (electric scooters, skateboards, rollerblades)
6. Construction and roadway workers
7. Emergency responders at crash scenes
8. Agricultural workers and equestrians on rural roads
9. Especially Vulnerable Groups:
  - a. Children (under 16): More impulsive, smaller stature, less visible, less able to judge vehicle speed and distance
  - b. Elderly persons (over 65): Slower walking speed, reduced hearing and vision, longer crossing time needed
  - c. Persons with disabilities: May have limited mobility, vision, or hearing

#### **SECTION 4.2 -- CHARACTERISTICS AND ENVIRONMENTS OF VRU CATEGORIES (7 minutes)**

[GRAPHIC: Florida VRU fatality statistics by type]

#### **PEDESTRIANS:**

Characteristics:

- Travel at 3-4 mph (walking) or 6-8 mph (jogging)
- Occupy sidewalks, crosswalks, shoulders, and parking areas
- May be distracted by phones, headphones, or conversation

Environment:

- Urban and suburban settings with high pedestrian density
- School zones (children)
- Tourist areas (Miami Beach, Orlando, Tampa)
- Florida's year-round warm weather increases pedestrian exposure year-round (unlike northern states where winter reduces pedestrian activity)

Statistics: Florida had 838 pedestrian fatalities in 2023, ranking 3rd nationally.

Pedestrians represented 21% of all Florida traffic fatalities.

#### **CYCLISTS:**

Characteristics:

- Travel at 10-20 mph typical road speed
- Occupy bike lanes, road shoulders, and full travel lanes where legal
- More stable than motorcycles but less capable of sudden maneuvers at speed

Environment:

- Dedicated bike lanes in urban areas (Miami, Orlando, Tampa, Jacksonville)
- Multi-use trails and greenways
- Rural roads (often without bike lanes or shoulders)

Statistics: 176 bicyclists killed in Florida in 2023. Florida ranks #1 in the nation

for bicycle fatalities per capita.

### **MOTORCYCLISTS:**

Characteristics:

- Travel at same speed as motor traffic
- More maneuverable than cars; can stop faster
- Highly visible in daylight but harder to see at dusk, night, or in heavy traffic

Environment:

- All road types; over-represented on rural highways and interstate entrance ramps

Statistics: 601 motorcycle fatalities in Florida in 2023. Motorcyclists represent 15% of all traffic fatalities despite being a small fraction of registered vehicles.

### **SECTION 4.3 -- FLORIDA LAWS FOR PROTECTION OF VULNERABLE ROAD USERS (6 minutes)**

[GRAPHIC: Florida Statute Quick Reference -- VRU Laws]

**PEDESTRIAN LAWS (Florida Statute 316.130):**

- Drivers must yield to pedestrians in crosswalks -- both marked and unmarked
- A pedestrian in a crosswalk "owns" that crosswalk; you must stop and wait until the pedestrian has crossed completely past your lane
- Pedestrians crossing outside a crosswalk must yield to vehicles, but drivers must still take reasonable steps to avoid striking them
- Walking on roadways: pedestrians must use sidewalks where available; if no sidewalk, walk FACING traffic on the left side of the road

**CYCLIST LAWS (Florida Statute 316.2065):**

- Cyclists have the same rights and duties as motor vehicle operators
- Cyclists must use a bike lane if one is provided, unless passing, turning, or avoiding hazards
- 3-foot minimum passing clearance required by law
- Cyclists may ride on roads, including arterials; they may NOT ride on limited-access expressways
- Riding two abreast is permitted but cyclists may not impede normal traffic flow
- Lights required at night (white front light visible from 500 feet, red rear reflector or light visible from 600 feet)

**MOVE OVER LAW (Florida Statute 316.126):**

- When approaching a stationary emergency vehicle, tow truck, or road maintenance vehicle with lights activated: move to the next lane to the left if safe to do so
- If unable to move over, reduce speed to 20 mph below the posted limit (minimum 5 mph on roads with a 25 mph or lower limit)
- Florida's Move Over Law was expanded in 2023 to include disabled vehicles with hazard lights -- all drivers must slow or move over for ANY disabled vehicle on the roadway shoulder
- Violation: 3-point noncriminal moving violation with fine up to \$500

**SCHOOL BUS LAWS (Florida Statute 316.172):**

- When a school bus is stopped with flashing red lights and the stop sign arm extended,

ALL traffic in BOTH directions must stop and remain stopped

- Exception: On divided highways with a physical barrier (raised median), oncoming traffic does not need to stop
- Passing a stopped school bus is a 4-point moving violation.

#### SECTION 4.4 -- PHYSICAL ENVIRONMENT AND VRU SAFETY (4 minutes)

[GRAPHIC: Diagram of road features that affect VRU safety]

VRU safety is heavily influenced by the physical design of the road environment:

- Sidewalks: The single most effective pedestrian safety measure. Florida communities without sidewalks have dramatically higher pedestrian fatality rates. School-age pedestrian deaths often occur on roads without sidewalks.
- Lighting: Nighttime pedestrian fatalities in Florida account for 76% of all pedestrian deaths. Adequate street lighting cuts pedestrian crash risk by 30%.
- Crosswalk markings: Marked crosswalks reduce pedestrian crash risk by 50% vs. unmarked crossings in some settings.
- Bike lanes: Dedicated bike lanes reduce cyclist injury rates by 30-40% compared to shared lanes.
- Traffic calming: Roundabouts reduce severe-injury and fatal crashes by 82-87% compared to traditional signalized intersections (FHWA data).

#### SECTION 4.5 -- VRU STATISTICS (4 minutes)

[GRAPHIC: US and Florida VRU Fatality Tables -- 2023 Data]

##### **NATIONAL DATA (NHTSA 2023):**

- Total pedestrian fatalities: 7,522 (highest since 1981)
- Pedestrian fatality rate: 2.25 per 100,000 population
- Fatalities by age group: 35-64 age group has highest absolute count; 65+ has highest per-capita rate
- Bicycle fatalities: 1,105 nationally

##### **FLORIDA DATA (2023):**

Fatal Crashes by Road User Type:

- Motor vehicle occupants: 2,139 (60.4%)
- Pedestrians: 838 (23.7%)
- Bicyclists: 176 (5.0%)
- Motorcyclists: 601 (17.0%)

[Note: percentages exceed 100% because some crashes involve multiple user types]

Fatality Rates by Age Group (Florida, pedestrians):

- Under 15: 0.8 per 100,000
- 15-24: 1.2 per 100,000
- 25-44: 2.9 per 100,000
- 45-64: 4.1 per 100,000
- 65+: 5.8 per 100,000 (highest rate)

#### SECTION 4.6 -- DRIVER RESPONSIBILITY AND SAFE DRIVING TECHNIQUES FOR VRU (5 minutes)

[GRAPHIC: "Safe Driving Around Vulnerable Road Users" checklist]

**DRIVER RESPONSIBILITIES:**

- Expect VRUs at all times -- especially at intersections, crosswalks, schools, and residential areas
- Treat every near-miss as if the person was hit -- report near-misses and adjust your driving immediately
- Yield is not optional -- it is legally required at crosswalks and school buses

**DRIVING TECHNIQUES:**

- Enter crosswalks and intersections slowly enough to STOP if a pedestrian appears
- Before turning right on red, look left, look right, then look LEFT AGAIN for cyclists and pedestrians approaching on the right
- Scan bike lanes before opening your door (the "Dutch Reach" method: open your door with your right hand if you are the driver -- this forces your body to turn and look for cyclists)
- At night, do not rely on pedestrians to see you -- they may not be wearing reflective clothing. Drive more slowly in areas with pedestrian activity after dark.

**CURRENT TRENDS AND INFRASTRUCTURE (VRU Safety Features):**

[GRAPHIC: Photos of safety infrastructure]

- Speed Reducing Measures: Speed tables (raised crosswalks), speed humps, chicanes, and traffic circles all reduce vehicle speeds to improve VRU safety
- Bike boxes: Advanced stop lines for cyclists at intersections allowing cyclists to position ahead of traffic; eliminate right-hook crashes between turning vehicles and cyclists going straight
- Letting cyclists merge before a junction: Sharrow (shared lane marking) and "bike box" allow cyclists to get ahead of turning cars
- Advanced stop lines for bicycles: Colored or marked zones 15-25 feet ahead of the vehicle stop line to increase cyclist visibility
- Protected intersections: Bump-outs and raised crosswalks ensure cyclists and pedestrians are visible to motorists

[MODULE 4 QUIZ -- 7 QUESTIONS -- 70% to advance]

Quiz Q1: Which of the following is NOT considered a vulnerable road user?

- A) A cyclist B) A pedestrian C) An occupant of an SUV D) A motorcyclist

**CORRECT: C**

Quiz Q2: Florida ranked what nationally for bicycle fatalities per capita in 2023?

- A) 3rd B) 5th C) 1st D) 10th

**CORRECT: C**

Quiz Q3: Under Florida's Move Over Law, if you cannot move to the next lane for a stopped emergency vehicle, you must:

- A) Stop completely B) Slow to 20 mph below the speed limit  
C) Honk as you pass D) Use your hazard lights and maintain speed

**CORRECT: B**

Quiz Q4: Passing a stopped school bus with flashing red lights is what type of violation?

- A) 1-point B) 2-point C) 3-point D) 4-point

**CORRECT: D**

Quiz Q5: Florida pedestrian fatalities account for what percentage of all traffic fatalities?

- A) 5% B) 10% C) 21% D) 35%

**CORRECT: C**

Quiz Q6: A "bike box" at an intersection is designed to:

- A) Store bicycles B) Allow cyclists to position ahead of traffic before a junction  
C) Serve as a bicycle repair area D) Mark a bicycle-free zone

**CORRECT: B**

Quiz Q7: What is the minimum clearance Florida law requires when passing a bicyclist?

- A) 1 foot B) 2 feet C) 3 feet D) 4 feet

**CORRECT: C**

**[VALIDATION QUESTION 3 -- TIME-LIMITED]:**

According to this module, Florida ranks in what position nationally for bicycle fatalities per capita?

- A) 2nd B) 1st C) 5th D) 3rd

**CORRECT: B -- 1st**

**MODULE 5: DUI PREVENTION Estimated Time: 30 minutes**

[GRAPHIC: Florida DUI Crash Statistics Infographic]

**SECTION 5.1 -- EFFECTS OF ALCOHOL AND DRUGS ON DRIVER CAPABILITIES (10 minutes)**

[GRAPHIC: "Blood Alcohol Content Effect Chart" table]

Alcohol affects driving ability through a predictable progression. It is critical to understand that **IMPAIRMENT BEGINS BEFORE** the legal limit of 0.08 BAC.

**EFFECTS BY BAC LEVEL:**

BAC 0.02 (about 1 drink for most people):

- Loss of judgment
- Relaxation, altered mood
- Decline in visual function
- Difficulty doing two things at once (divided attention)

**BAC 0.05:**

- Further reduced coordination and judgment
- Reduced response to emergency driving situations
- Difficulty steering
- Reduced information processing ability
- Impaired tracking ability

BAC 0.08 (Florida's legal limit):

- Muscle coordination severely impaired
  - Concentration difficulty
  - Short-term memory loss possible
  - Speed control impaired
  - Reduced information processing
  - Perception impaired
- At this level, crash risk is 4x higher than sober.

**BAC 0.10:**

- Reaction time and control clearly deteriorated
- Reduced ability to maintain lane position and brake appropriately

**BAC 0.15 (well above legal limit):**

- Far less muscle control
  - Vomiting possible
  - Major loss of balance
- At this level, crash risk is 12x higher than sober.

KEY POINT: Impairment begins at the FIRST drink, not at 0.08. Many drivers feel "fine" at 0.05 but their driving ability is already measurably degraded. The law sets 0.08 as the per se legal limit, but it is NOT a safe driving limit.

**VISION EFFECTS OF ALCOHOL:**

- Reduced peripheral vision (tunnel vision): A driver at 0.08 has a significantly narrowed field of view; they may miss objects approaching from the side
- Reduced night vision
- Double vision at higher BAC levels
- Reduced ability to track moving targets

**REACTION TIME EFFECTS:**

- Reaction time at 0.08: slowed by 20-30% compared to sober
- At 60 mph, a 0.2-second increase in reaction time adds 17 feet to braking distance
- Order of impairment: Judgment impairs FIRST, then coordination, then vision, then reaction time worsens, then speaking becomes slurred (by which point the driver is dangerously impaired)

**EFFECT OF OTHER DRUGS:**

- Cannabis: Impairs divided attention, tracking, and reaction time. Effects can last 4-6+ hours after use. A driver who smokes cannabis and drives within 1-3 hours doubles their crash risk.
- Prescription opioids (Oxycodone, Hydrocodone): Cause drowsiness, slow reaction time, and impair judgment. Driving while using prescribed opioids constitutes DUI if normal faculties are impaired.
- Benzodiazepines (Xanax, Valium): Similar to alcohol in effect; increase crash risk substantially even at therapeutic doses
- Stimulants (methamphetamine, cocaine, high-dose caffeine): Cause overconfidence, tunnel focus, and delayed reaction to unexpected hazards
- Combination effects: Mixing alcohol with any drug amplifies impairment beyond

what either substance causes alone.

## SECTION 5.2 -- RELATIONSHIP BETWEEN ALCOHOL CONSUMED AND BAC (8 minutes)

[GRAPHIC: BAC Calculation Chart by weight and number of drinks]

### **BAC IS AFFECTED BY:**

1. Number of drinks consumed
2. Time period over which drinks were consumed
3. Body weight (larger body = lower BAC per drink, all else equal)
4. Sex (women generally reach higher BAC per drink due to lower body water content)
5. Food consumption (eating slows alcohol absorption)
6. Individual tolerance (does NOT mean less impairment -- tolerance means you feel less drunk, but your driving ability is still impaired)
7. Fatigue (amplifies impairment)

### **EQUIVALENCE OF ALCOHOLIC BEVERAGES:**

Standard drinks each contain approximately 0.6 oz of pure alcohol:

- 12 oz regular beer (5% alcohol) = 1 standard drink
- 5 oz wine (12% alcohol) = 1 standard drink
- 1.5 oz distilled spirits (40% / 80-proof) = 1 standard drink
- A 22 oz "tall boy" beer (5%) = approximately 1.8 standard drinks
- A 9 oz pour of wine = approximately 1.8 standard drinks

IMPORTANT: There is NO truth to the myth that beer or wine impairs less than liquor. The same amount of alcohol impairs equally regardless of the delivery vehicle.

### **BAC ELIMINATION RATE:**

The liver processes approximately 0.015 BAC per hour. Nothing accelerates this:

- Coffee does NOT sober you up (it just makes you an awake drunk driver)
- Cold showers, food, or exercise do NOT accelerate BAC reduction
- Time is the only thing that lowers BAC

Example: A person at 0.12 BAC at 11 PM will not be below 0.08 until approximately 3:40 AM -- over 4.5 hours later.

## SECTION 5.3 -- LEGAL CONSEQUENCES OF DUI IN FLORIDA (7 minutes)

[GRAPHIC: "Florida DUI Penalties at a Glance" table]

Florida Statute 316.193 establishes DUI penalties that become increasingly severe:

### **FIRST DUI OFFENSE (BAC 0.08-0.14):**

- Fine: \$500-\$1,000
- Imprisonment: Up to 6 months
- License revocation: Minimum 180 days, up to 1 year
- Probation: 1 year maximum
- Community service: 50 hours mandatory
- Impoundment: Vehicle impounded for 10 days
- DUI school required

SECOND OFFENSE (within 5 years):

- Fine: \$1,000-\$2,000
- Imprisonment: Up to 9 months (mandatory minimum 10 days if within 5 years)
- License revocation: Minimum 5 years
- Ignition interlock device required for minimum 1 year
- Impoundment: 30 days

THIRD OFFENSE (within 10 years of 2nd):

- FELONY charge (third-degree felony in Florida)
- Fine: \$2,000-\$5,000
- Imprisonment: Up to 5 years
- License revocation: Minimum 10 years
- Ignition interlock: 2 years minimum

AGGRAVATING FACTORS (increase penalties):

- BAC of 0.15 or higher: Enhanced penalties including higher fines and longer impoundment regardless of offense number
- DUI with minor in vehicle: Mandatory jail time, enhanced fines
- DUI causing property damage: 1st-degree misdemeanor
- DUI causing serious bodily injury: 3rd-degree felony
- DUI manslaughter: 2nd-degree felony (minimum 4 years prison); 1st-degree if driver knew a crash occurred and fled (minimum 10.5 years)

SECTION 5.4 -- FINANCIAL CONSEQUENCES OF DUI (3 minutes)

[GRAPHIC: "The Real Cost of a DUI" breakdown]

The average total cost of a first DUI conviction in Florida:

- Fines and court costs: \$1,500-\$5,000
- Attorney fees: \$3,000-\$10,000
- DUI school/substance abuse treatment: \$500-\$2,000
- License reinstatement fee: \$650+
- Ignition interlock device (if required): \$80-\$150/month x 12+ months
- Auto insurance increase (SR-22 filing required): \$1,500-\$3,000/year for 3+ years
- Lost wages (jail time, court appearances): Variable

TOTAL ESTIMATED COST: \$10,000-\$25,000+ for a first offense

A repeat offense or DUI manslaughter can cost hundreds of thousands of dollars in legal fees, settlements, and lifetime insurance increases.

Societal costs: DUI crashes cost Florida an estimated \$8.7 billion annually in medical costs, lost productivity, emergency services, and law enforcement resources.

SECTION 5.5 -- WAYS TO AVOID DRIVING IMPAIRED (2 minutes)

[GRAPHIC: "Plan Before You Drink" options list]

If you plan to consume alcohol or substances that impair driving, plan your safe transportation BEFORE you begin drinking:

1. Designate a driver in advance (before anyone has consumed alcohol)
2. Use a rideshare app (Uber, Lyft): Available throughout Florida 24/7
3. Call a taxi or car service
4. Call a sober friend or family member
5. Stay overnight (at a friend's home, a hotel, or ask your host)
6. Use public transit (available in most Florida metro areas late at night)
7. If already impaired and no option available -- call 911. Officers can help you get home safely; this is far better than a DUI or killing someone.

REMINDER: In Florida, you can be arrested for DUI even on a private parking lot. Sitting in the driver's seat with the engine running while impaired can constitute DUI under Florida law.

[MODULE 5 QUIZ -- 8 QUESTIONS -- 70% to advance]

Quiz Q1: At what BAC does Florida's per se DUI law begin?

- A) 0.05 B) 0.08 C) 0.10 D) 0.15

**CORRECT: B**

Quiz Q2: At BAC 0.08, driving crash risk compared to a sober driver is:

- A) Twice as high B) Three times C) Four times D) Eight times

**CORRECT: C**

Quiz Q3: Which of the following is equivalent to one standard drink?

- A) 22 oz beer B) 12 oz beer (5% ABV) C) 9 oz wine D) 3 oz liquor

**CORRECT: B**

Quiz Q4: What is the approximate BAC elimination rate per hour?

- A) 0.05 B) 0.02 C) 0.015 D) 0.01

**CORRECT: C**

Quiz Q5: A first-time DUI conviction in Florida requires a minimum community service of:

- A) 100 hours B) 25 hours C) No requirement D) 50 hours

**CORRECT: D**

Quiz Q6: Which of the following will speed up BAC reduction?

- A) Coffee B) Cold shower C) Food D) None of the above

**CORRECT: D**

Quiz Q7: DUI causing serious bodily injury in Florida is classified as:

- A) A misdemeanor B) A 3rd-degree felony C) A 2nd-degree felony D) An infraction

**CORRECT: B**

Quiz Q8: What is the FIRST ability to be impaired by alcohol?

- A) Coordination B) Vision C) Judgment D) Reaction time

**CORRECT: C -- Judgment impairs first**

**[VALIDATION QUESTION 4 -- TIME-LIMITED]:**

According to this module, at what BAC level is crash risk 12 times higher than sober?

- A) 0.08 B) 0.10 C) 0.12 D) 0.15

**CORRECT: D -- 0.15**

## MODULE 6: SAFETY EQUIPMENT Estimated Time: 20 minutes

[GRAPHIC: Vehicle Safety Equipment diagram -- labeled cutaway of vehicle interior]

### SECTION 6.1 -- SAFETY BELTS (6 minutes)

[GRAPHIC: Proper seat belt positioning diagram]

#### EFFECTIVENESS:

- Seat belts reduce the risk of death in a frontal crash by 45% for front-seat occupants (NHTSA)
- Seat belts reduce death risk by 60% for light truck occupants
- In Florida in 2022, 51% of all traffic fatalities were UNRESTRAINED occupants
- Ejection from the vehicle occurs in 1% of crashes but accounts for 21% of fatalities.  
A seat belt prevents ejection.

#### PROPER POSITIONING:

- Lap belt: Must lie flat across the upper thighs/hip bones -- NOT across the abdomen (belt across the abdomen in a crash can cause severe internal injuries)
- Shoulder belt: Must cross the chest and shoulder -- NOT tucked behind the back or under the arm (tucking it creates an unrestrained condition)
- Adjust the seat so you can reach the pedals without stretching
- If the shoulder belt rests on your neck, use a belt positioner (often available from the dealer or auto parts stores); do not tuck it behind your back.

#### FLORIDA LAW -- SEAT BELTS (Florida Statute 316.614):

- All front-seat occupants must wear a seat belt
- All rear-seat passengers under age 18 must wear a seat belt
- The DRIVER is responsible for ensuring all passengers under 18 are buckled
- Violation: \$30 fine + court costs. Note: Florida does not issue points for seat belt violations but the fine can be significant with court charges added.

### SECTION 6.2 -- HEAD RESTS (3 minutes)

[GRAPHIC: Correct vs. incorrect head restraint positioning]

Head restraints (commonly called "headrests") are NOT comfort features -- they are critical safety devices designed to prevent whiplash in rear-end collisions.

#### PROPER POSITIONING:

- The top of the head restraint should be level with the TOP of your head (not the back of your head)
- The restraint should be as close to the back of your head as comfortable -- ideally within 4 inches
- An incorrectly positioned head restraint (too low, too far back) provides minimal protection against whiplash

Whiplash (cervical hyperextension) is the most common injury in rear-end crashes. Proper head restraint positioning can reduce whiplash injury severity by 40%.

## SECTION 6.3 -- CHILD RESTRAINTS (5 minutes)

[GRAPHIC: "Child Seat Selection by Age/Weight/Height" guide]

Florida Statute 316.613 requires:

- Children under age 5 must be secured in a federally approved child restraint device
- Children under age 3 must be in a separate carrier (not the vehicle seat belt alone)
- Children aged 3-5 may use a separate carrier OR be secured in a booster seat with the vehicle's seat belt

### **TYPES OF CHILD RESTRAINTS:**

1. Rear-facing infant seat (birth to 2 years or maximum weight/height for seat):
  - Install in the BACK SEAT only
  - Install rear-facing -- facing the back of the car
  - Never install in front of an active airbag
  - Keep rear-facing as long as possible (up to the maximum weight/height of the seat)
2. Forward-facing car seat with harness (typically 2-5 years, 40-65 lbs):
  - Install in back seat, forward-facing with internal harness
  - Keep in harness until maximum weight/height is reached
3. Booster seat (40-120 lbs or until seat belt fits properly, typically 4-12 years):
  - Positions the vehicle seat belt correctly for a child's smaller body
  - Reduces injury risk by 45% compared to seat belt alone for this age group
4. Vehicle seat belt (when the seat belt fits properly -- typically when the child is 4'9" or taller, usually age 8-12)

### **IMPORTANT INSTALLATION NOTE:**

- All car seats should be installed using LATCH (Lower Anchors and Tethers for Children) connectors or with a properly tightened seat belt
- Car seat installation errors reduce effectiveness significantly -- Florida offers free car seat inspection stations at fire stations statewide

## SECTION 6.4 -- AIR BAGS (4 minutes)

[GRAPHIC: Airbag deployment diagram -- front and side airbags]

### **TYPES:**

- Frontal airbags: In the steering wheel (driver) and dashboard (passenger)
- Side airbags: In the seat or door panel; protect against side impacts
- Curtain airbags: Fall from the headliner to protect heads in side impacts and rollovers
- Knee airbags: Protect knees and legs in frontal crashes
- Rear airbags (some newer vehicles)

### **SPECIAL CAUTIONS -- CHILDREN:**

- Children under age 13 should NEVER sit in front of an active frontal airbag
- A deploying airbag inflates at 100-220 mph. This force is designed for an adult's chest region -- it can cause fatal injuries to a child or small adult who is too close to the bag.
- Rear-facing infant seats must NEVER be placed in the front passenger seat with an

active airbag (the bag deploys directly into the back of the seat where the infant's head is located)

- If a vehicle has no back seat (or all rear seats are occupied by children), the front passenger airbag should be deactivated using the on/off switch if available, and the child should be placed as far back as possible

**GENERAL AIRBAG NOTES:**

- Airbags supplement seat belts -- they do NOT replace them. An unbelted occupant can be seriously injured by the airbag itself.
- Airbags deploy only once; after deployment, the bag must be replaced by a dealer.
- Modern cars may have 6-10+ airbags. Check your owner's manual.

**SECTION 6.5 -- VEHICLE SAFETY MAINTENANCE (2 minutes)**

[GRAPHIC: Vehicle inspection checklist]

- Tires: Check pressure monthly. Check tread depth with a penny (if Lincoln's head is fully visible, tires are worn below 2/32" and must be replaced)
- Brakes: Service at least every 12,000 miles or if you feel pulsation, hear grinding, or notice extended stopping distances
- Lights: Test all exterior lights monthly including taillights and brake lights (Florida law requires functioning brake lights)
- Windshield: Replace wiper blades every 6-12 months (Florida's heat degrades rubber quickly). Ensure defroster works.

**- CARBON MONOXIDE (CO) WARNING:**

- Carbon monoxide is an odorless, colorless, potentially lethal gas produced by all gasoline engines and exhaust systems
- Never run your engine in an enclosed space (garage with the door closed)
- Symptoms: Headache, nausea, dizziness, confusion -- these are warning signs. Exit the vehicle immediately and move to fresh air.
- A cracked or failing exhaust system can allow CO to enter the passenger compartment
- Source of CO poisoning even in moving vehicles: driving with the tailgate down on a pickup truck (especially with a camper shell) or following too closely behind a large diesel vehicle

[MODULE 6 QUIZ -- 5 QUESTIONS -- 70% to advance]

Quiz Q1: Where should the top of a head restraint be positioned?

- A) Level with the ear B) Level with the top of the head
- C) Level with the shoulders D) As low as possible

**CORRECT: B**

Quiz Q2: Children under what age must use a separate child restraint device in Florida?

- A) 2 B) 5 C) 8 D) 13

**CORRECT: B -- Under age 5**

Quiz Q3: Carbon monoxide gas is:

- A) Brown and has a rotten egg smell B) White with a sweet odor
- C) Colorless and odorless D) Blue with a sharp smell

**CORRECT: C**

Quiz Q4: A rear-facing infant seat should NEVER be placed where?

- A) In the back seat B) In front of an active airbag  
C) On a seat with LATCH anchors D) Facing the rear of the vehicle

**CORRECT: B**

Quiz Q5: Seat belts reduce the risk of death in a frontal crash by what percentage?

- A) 15% B) 25% C) 35% D) 45%

**CORRECT: D**

## **MODULE 7: PSYCHOLOGICAL FACTORS Estimated Time: 20 minutes**

[GRAPHIC: "Mind on the Road -- How Psychology Affects Driving" visual]

NOTE TO REVIEWER: This module discusses psychological factors from the perspective of factors that can both LEAD TO and PREVENT crashes.

### **SECTION 7.1 -- STRESS AND DRIVING (5 minutes)**

#### **HOW STRESS LEADS TO CRASHES:**

- Stress narrows attention: A stressed driver tends to focus on their emotional state rather than the road. They may miss red lights, fail to check mirrors, or react aggressively to minor inconveniences.
- Stress makes drivers impatient: Impatient drivers take more risks -- following too closely, making unsafe passes, running yellow lights.
- Stressed drivers are more prone to road rage: Minor incidents (a driver cutting you off) become major emotional events when you're already stressed.
- Physical effects: Stress elevates cortisol and adrenaline, increasing heart rate and causing muscle tension -- both of which interfere with smooth, coordinated steering, braking, and scanning.

#### **HOW TO MANAGE STRESS BEFORE DRIVING:**

- Recognize if you are in a highly emotional state before getting behind the wheel
- Allow extra travel time so you are not rushed
- Listen to calming music rather than aggressive or agitating media
- Practice deep breathing: 4 counts in, hold 4, 4 counts out -- this activates the parasympathetic nervous system and reduces cortisol within minutes
- If significantly emotionally distressed, delay driving or ask someone else to drive

#### **HOW STRESS CONTRIBUTES TO CRASHES (factor):**

A 2023 AAA study found that emotional distress (agitation, sadness, crying) increased crash risk by 9.8 times compared to calm driving.

#### **HOW STRESS PREVENTION PREVENTS CRASHES:**

- Time management: Leaving early eliminates time-pressure-related risk-taking
- Route planning: Avoid known traffic hotspots when possible
- Compartmentalization: Consciously decide to focus only on driving; address other problems after you arrive

## SECTION 7.2 -- FATIGUE AND DRIVING (8 minutes)

[GRAPHIC: "Drowsy Driving -- A Form of Impaired Driving" comparison to DUI]

### HOW FATIGUE LEADS TO CRASHES:

- Drowsy driving causes approximately 100,000 police-reported crashes per year in the U.S. (NHTSA); the actual number is likely 3-6x higher due to underreporting
- Microsleeps: Very brief (1-30 second) involuntary lapses in consciousness. At 60 mph, a 4-second microsleep results in traveling 352 feet -- over a football field -- with no driver awareness or control whatsoever.
- Fatigue impairment comparable to alcohol: Being awake for 18 hours produces impairment equivalent to 0.05 BAC; 24 hours awake = equivalent to 0.10 BAC
- Warning signs of fatigue:
  1. Difficulty keeping eyes open or focusing
  2. Yawning repeatedly
  3. Wandering thoughts; difficulty concentrating
  4. Drifting out of your lane or missing exits
  5. Not remembering the last few miles

Any of these signs means you are TOO tired to drive safely.

### FATIGUE IN FLORIDA:

Long-distance driving is common in Florida due to its geography. Drivers traveling I-95, I-75, or the Turnpike often cover hundreds of miles. Rest areas are provided specifically for fatigued drivers. Florida law does not penalize stopping at rest areas for any length of time -- use them.

### HOW TO MANAGE FATIGUE (factor that prevents crashes):

- Do not start a long drive tired -- sleep before departure, not after
- Take breaks every 2 hours or 100 miles on long trips
- Naps: A 20-minute power nap at a rest area is one of the most effective fatigue countermeasures -- it significantly improves alertness for 1-3 hours
- Caffeine: Temporarily effective (1-2 hours) but is NOT a substitute for sleep
- The ONLY true remedy for fatigue is sleep

## SECTION 7.3 -- EMOTIONAL DISTRESS AND DRIVING (4 minutes)

Emotional distress -- including grief, anger, fear, depression, and anxiety -- impairs driving in similar ways to chemical impairment:

- Grief: Following a serious personal loss (death, divorce), cognitive function is significantly impaired. Grief is one of the most under-recognized driving hazards.
- Anger/Road Rage:
  - Aggressive driving behaviors (tailgating, cutting off, honking, obscene gestures) escalate road rage incidents that can lead to crashes or violence
  - If another driver is acting aggressively toward you:
    1. Do NOT engage back -- do not make eye contact, gesture, or honk
    2. Create space between your vehicle and theirs
    3. Do not go home -- drive to a public place or police station
    4. If threatened, call 911 while continuing to drive

Florida Statute 316.1923 defines aggressive careless driving as a moving violation.

- Road rage incidents involving firearms have increased in Florida; never engage.

#### SECTION 7.4 -- APPROPRIATE ATTITUDE TOWARD DRIVING (3 minutes)

[GRAPHIC: "Driver Attitude Self-Assessment" checklist]

A safe driving attitude encompasses:

1. Respect for other road users: Every other vehicle contains a person -- treat them the way you want to be treated.
2. Patience: Traffic, delays, and imperfect drivers are givens. Your arrival a few minutes late is never worth a crash.
3. Humility: Overconfidence is a crash risk. Experienced drivers who believe they cannot crash are more likely to take risks. Every driver makes mistakes.
4. Responsibility: You are in control of a 3,000-lb machine. The consequences of driver error fall not only on you but on others who share the road.
5. Sobriety: Never drive while impaired -- choose alternatives.
6. Attentiveness: Driving requires your full cognitive attention. Put down the phone, avoid other distractions, and stay focused on the task.

#### APPLYING ATTITUDE CHANGES TO REAL AND SIMULATED DRIVING SITUATIONS:

The following are common scenarios and the attitude-based safe response:

- a. You see someone weaving in traffic: Give them more space, be prepared to react, and if dangerous, call 911 from a hands-free device.
- b. You're running late: Accept that you cannot safely make up time, and call ahead if needed. Drive within the speed limit.
- c. Another driver cuts you off: Brake safely, take a breath, continue calmly. Their risk-taking is their problem -- don't let it become yours.
- d. You're upset before driving: Consider delaying the trip, taking a 5-minute walk, or asking someone else to drive.

#### DEVELOPING A COMMITMENT TO CHANGE:

This course is only the beginning. The habits you develop over your driving career are built through thousands of individual decisions -- each one an opportunity to practice safer behavior. Commit to:

- Applying what you learned here in every driving situation
- Self-monitoring your emotional state before and during driving
- Never tolerating impaired driving in yourself or passengers

[MODULE 7 QUIZ -- 6 QUESTIONS -- 70% to advance]

Quiz Q1: A 4-second microsleep at 60 mph results in traveling approximately:

- A) 50 feet B) 100 feet C) 200 feet D) 352 feet

**CORRECT: D**

Quiz Q2: Being awake for 24 hours produces impairment comparable to a BAC of:

- A) 0.05 B) 0.08 C) 0.10 D) 0.15

**CORRECT: C**

Quiz Q3: If another driver is acting aggressively toward you, you should:

- A) Honk and confront them B) Increase your speed to escape  
C) Do not engage; create space and drive to a public place D) Block them in

**CORRECT: C**

Quiz Q4: Which of the following is the most effective countermeasure for driver fatigue?

- A) Coffee B) Opening a window C) Turning up the radio D) A 20-minute nap

**CORRECT: D**

Quiz Q5: The AAA study mentioned in this course found that emotional distress increased crash risk by approximately:

- A) 2x B) 5x C) 9.8x D) 15x

**CORRECT: C**

Quiz Q6: An appropriate attitude toward driving includes all EXCEPT:

- A) Patience B) Humility C) Overconfidence D) Responsibility

**CORRECT: C -- Overconfidence is a hazard, not a virtue**

**[VALIDATION QUESTION 5 -- TIME-LIMITED]:**

According to this module, a 20-minute nap is an effective countermeasure for:

- A) Alcohol impairment B) Fatigue C) Stress D) Anger

**CORRECT: B -- Fatigue**

**MODULE 8: FLORIDA TRAFFIC LAWS Estimated Time: 30 minutes**

[GRAPHIC: "Florida's Point System at a Glance" chart]

**SECTION 8.1 -- PROGRESSIVE SEVERITY OF LEGAL PENALTIES AND POINT SYSTEM (10 minutes)**

[GRAPHIC: Florida DHSMV Point System Table]

**FLORIDA'S POINT SYSTEM (Florida Statute 322.27):**

Points are added to a driver's license record upon conviction of a traffic offense.

The following are common violations and their point values:

**3 Points:**

- Speeding: 15 mph or less over the limit
- Improper passing
- Not yielding right of way
- Running a red light (where no crash resulted)
- Running a stop sign
- Unlawful speed in a school zone

**4 Points:**

- Speeding 16 mph or more over the limit
- Reckless driving (if no accident)
- Making an improper turn
- Failing to stop for a school bus

**6 Points:**

- Any moving violation that causes a crash

- Reckless driving (if accident results)
- Leaving the scene of a crash involving property damage

**POINT ACCUMULATION AND LICENSING ACTIONS:**

- 12 points in 12 months = 30-day suspension
- 18 points in 18 months = 3-month suspension
- 24 points in 36 months = 1-year suspension (this is automatic -- no hearing)

**LICENSING ACTIONS -- DEFINITIONS:**

**CANCELLATION:** The termination of a license that was issued in error or was procured by fraud. The driver must re-qualify before a new license is issued.

**SUSPENSION:** A temporary withdrawal of driving privileges for a specified period or until specific conditions are met. A suspended license can generally be reinstated after the suspension period and payment of reinstatement fees.

**REVOCATION:** The permanent termination of driving privileges. A revoked driver must re-apply for a license from scratch after the revocation period, which may include re-testing, DUI school, and other requirements. License revocation is more serious than suspension.

**HABITUAL TRAFFIC OFFENDER (HTO) STATUS (Florida Statute 322.264):**

A driver is designated as an HTO -- and faces a 5-year license revocation -- if within a 5-year period they are convicted of 3 or more:

- Felony charges involving a motor vehicle
- DUI offenses
- Any combination of the following violations totaling 15 or more points

An HTO must complete the 12-hour ADI course before reinstatement.

**SECTION 8.2 -- SPEED LIMITS IN FLORIDA (5 minutes)**

[GRAPHIC: Florida Speed Limit Reference Card]

**DEFAULT SPEED LIMITS (where not otherwise posted):**

- Residential areas: 30 mph
- Business districts: 30 mph
- Rural interstate: 70 mph
- Urban interstate: 65 mph
- Limited-access managed roads: 70 mph (unless otherwise posted)
- All other roads: 55 mph

**SPECIFIC ZONES:**

- School zones: 15-20 mph when signals are flashing (active school hours)
- Construction zones: Posted speed limit; fines doubled for all speeding violations
- Hospital zones: Reduced limits may apply; watch for posted signs

**FLORIDIANS NOTE:** Many Florida streets have posted limits as low as 25 mph in residential areas or as high as 75 mph on some rural I-75 and I-10 segments.

Always observe posted signs -- the defaults above apply ONLY when no sign is present.

### SECTION 8.3 -- SIGNS, SIGNALS, AND ROAD MARKINGS (8 minutes)

[GRAPHIC: Florida Road Sign Reference Guide]

#### **TRAFFIC SIGNALS:**

- GREEN: Proceed if intersection is clear; does not guarantee safety
- YELLOW: Prepare to stop; only proceed if stopping safely is not possible
- RED: Stop completely before the stop line; remain stopped until green
- GREEN ARROW: Protected turn in the direction of the arrow; cross traffic is stopped
- FLASHING RED: Treat as a stop sign
- FLASHING YELLOW: Slow and proceed with caution
- DARK SIGNAL (power failure): Treat as a 4-way stop

RIGHT TURN ON RED (Florida Statute 316.075):

- Permitted after a complete stop unless a "No Turn on Red" sign is posted
- Yield to all pedestrians and vehicles with a green light before turning

#### **CENTERLINE MARKINGS:**

- Broken yellow line: Passing permitted for both directions when safe
- Solid yellow line on YOUR side: No passing permitted for you
- Double solid yellow: No passing in either direction
- Solid white line: Lane separation in same direction; do not cross unless safe (lane changes) or required (shoulder)

#### **CROSSWALKS:**

A crosswalk exists at every intersection -- whether painted or not. Drivers must yield to pedestrians in crosswalks, including unmarked crosswalks.

#### **BIKE LANES:**

- White painted lane, often marked with bicycle symbol
- Motor vehicles may enter only when turning or passing slow-moving vehicles
- Do not park in or use bike lanes for travel

#### **TURN LANES:**

- Shared left-turn lanes (two-way left turn lanes, marked by solid and broken yellow lines): Used by vehicles in BOTH directions to begin left turns. These are temporary storage lanes only -- never drive in them for extended distances.

#### **STOP/YIELD SIGNS:**

- STOP (red octagon): Complete stop; proceed only when safe
- YIELD (red/white triangle): Slow down; stop if necessary; yield to all traffic

### SECTION 8.4 -- SCHOOL BUSES (3 minutes)

[GRAPHIC: School bus stop arm and flashing light diagram]

Florida Statute 316.172 requires that ALL vehicles (in both directions on undivided roads) STOP when a school bus is stopped with:

- The stop arm extended, AND
- The alternating red lights flashing

You must remain stopped until:

- The lights stop flashing, AND
- The stop arm is retracted, AND
- All children have cleared the roadway

EXCEPTION: On divided highways with a physical median barrier (concrete or raised divider), approaching traffic from the opposite direction does not need to stop.

NOTE: A painted center line or turn lane is NOT a physical barrier.

Violation: 4-point moving violation; can result in license suspension for repeat offenses.

#### SECTION 8.5 -- EMERGENCY VEHICLES (2 minutes)

Florida Statute 316.126 -- When an emergency vehicle is approaching with sirens and/or lights activated:

1. Pull to the RIGHT edge of the roadway
2. Stop completely
3. Remain stopped until the emergency vehicle has passed

Exception: At an intersection, do not block the intersection -- pull through and then pull to the right if the intersection cannot be cleared without obstructing the emergency vehicle's path

MOVE OVER LAW (repeated from VRU Module):

For stationary emergency, tow, and utility vehicles on the shoulder: Move to the next lane left if safe; if not, reduce speed to 20 mph below the speed limit.

#### SECTION 8.6 -- REQUIRED VEHICLE SAFETY EQUIPMENT (2 minutes)

Florida Statute 316.610 and related statutes require every motor vehicle operated on Florida highways to have in proper working order:

- Brakes (including parking brake)
- Steering mechanism
- Tires (minimum tread depth 2/32")
- Horn (audible from 200 feet)
- Windshield wipers
- Rearview mirror
- Two headlights (white, visible 450 feet in darkness, required at dusk through dawn and in rain when wipers are in use)
- Four turn signals (front and rear, amber)
- Two brake lights (red, visible 300 feet)
- One rear license plate light (white)
- Muffler (no excessive noise)
- Windows: Front windshield and front side windows must meet minimum transparency requirements (Florida tinting law)

[MODULE 8 QUIZ -- 8 QUESTIONS -- 70% to advance]

Quiz Q1: What happens to a Florida driver who accumulates 18 points in 18 months?

- A) 30-day suspension B) 3-month suspension C) 1-year suspension D) Revocation

**CORRECT: B**

Quiz Q2: What is the default speed limit in a Florida residential area where no sign is posted?

- A) 25 mph B) 30 mph C) 35 mph D) 40 mph

**CORRECT: B**

Quiz Q3: A flashing yellow traffic signal means:

- A) Stop completely B) Prepare to stop; only proceed if you cannot stop safely  
C) Slow and proceed with caution D) Traffic signal malfunction -- treat as stop sign

**CORRECT: C**

Quiz Q4: What is the difference between a suspended and revoked license?

- A) They are the same B) Suspension is permanent; revocation is temporary  
C) Suspension is temporary; revocation is permanent termination requiring re-application  
D) A revocation only applies to DUI violations

**CORRECT: C**

Quiz Q5: On a divided highway with a raised median, the school bus stop rule:

- A) Applies to oncoming traffic B) Does not apply to oncoming traffic  
C) Requires all traffic to stop including interstate traffic D) Only applies to  
the bus's lane

**CORRECT: B**

Quiz Q6: Florida's default speed limit on a rural interstate where no sign is posted is:

- A) 55 mph B) 60 mph C) 65 mph D) 70 mph

**CORRECT: D**

Quiz Q7: Which of the following is a 6-point violation in Florida?

- A) Speeding 10 mph over the limit B) Running a red light with no crash  
C) Any moving violation causing a crash D) Failing to yield

**CORRECT: C**

Quiz Q8: Right turn on red in Florida is:

- A) Always prohibited B) Permitted after a complete stop unless signed otherwise  
C) Permitted without stopping D) Permitted only on divided highways

**CORRECT: B**

[VALIDATION QUESTION 6 -- TIME-LIMITED]:

According to this module, how many points in 12 months triggers a 30-day suspension?

- A) 6 points B) 8 points C) 12 points D) 18 points

**CORRECT: C -- 12 points**

## COURSE COMPLETION AND CERTIFICATE PROCESS

Upon completing all 8 modules and passing all module quizzes, the student is presented with the FINAL EXAMINATION:

- 40 questions randomly selected from the approved 500-question bank
- Mix of true/false and multiple-choice
- 80% passing score required (32 of 40 correct)
- Maximum 3 attempts
- Student cannot see questions they answered incorrectly until after the exam is closed to prevent immediate re-testing from memory
- On passing: Certificate of completion generated immediately; PDF downloadable
- Certificate includes: Student name, DOB, DL number, date of completion, course name, provider name, provider approval number (to be assigned by FLHSMV)
- Florida DHSMV is notified electronically within 24 hours of course completion
- Physical certificates mailed within 2 business days upon request

## **PART ONE -- SECTION F: ANTI-CHEATING SAFEGUARDS**

1. **UNIQUE QUESTION DELIVERY:** The 500-question bank allows for randomized selection of 40 final exam questions. The probability of two students receiving the same exact 40-question set is less than 1 in  $10^{54}$ . Questions cannot be pre-memorized en masse.
2. **TIME-LIMITED VALIDATION QUESTIONS** (described in Section C): Identity + content-based questions with 90-second window prevent someone else from answering remotely.
3. **SESSION MONITORING** (described in Section C): IP logging, activity monitoring, and anomaly detection.
4. **ID VERIFICATION** (described in Section B): Photo ID uploaded at registration.
5. **NO QUESTION DISPLAY AFTER EXAM:** After submitting the final exam, the student cannot view the questions again. Feedback is provided on whether each answer was correct or incorrect, without revealing the correct answer if wrong.
6. **FINAL EXAM QUESTION ROTATION:** Each of the 3 allowed exam attempts uses a DIFFERENT randomly generated 40-question set from the 500-question bank.
7. **COURSE ACCESS PERIOD:** 30 days only. No indefinite access that would allow accumulated answer-sharing.
8. **PROCTOR REVIEW:** On request by FLHSMV or upon suspicious activity detection, Quick Pass staff can manually review session logs and require an identity re-verification procedure.

## **PART ONE -- SECTION G: INSTRUCTOR QUALIFICATIONS AND STUDENT SUPPORT**

### **STUDENT QUESTIONS:**

Students who have questions about course content may contact Quick Pass Traffic School via:

- Live chat (available on the platform during business hours)
- Email: [support@quickpasstrafticschool.com](mailto:support@quickpasstrafticschool.com) (responses within 24 hours)

### **INSTRUCTOR QUALIFICATIONS:**

All support staff who answer course-content questions from students must meet the following qualifications:

- Must be familiar with Florida Statutes 316 and 322 (traffic and licensing laws)
- Must complete a pre-service training program covering:
  - a. Florida-specific traffic laws (current year)
  - b. Florida DHSMV course standards under Chapter 15A-8, FAC
  - c. Course platform navigation and content
- Must complete annual in-service training covering:
  - a. Any updates to Florida traffic law since initial certification
  - b. New FLHSMV guidance or rule changes
  - c. Review of common student questions/errors from the prior year

### **DESIGNATED FLORIDA-SPECIFIC POINT OF CONTACT:**

Jordan Lovelace

Quick Pass Traffic School

6213 NW 63rd Way, Parkland, Florida 33067

admin@quickpasstrafticschool.com

## **PART ONE -- SECTION H: OVERSIGHT PLAN**

Pursuant to Section 318.1451(2)(a), Florida Statutes, Quick Pass Traffic School maintains the following oversight structure:

### **1. MANAGEMENT OVERSIGHT:**

Jordan Lovelace (Owner/Director) is responsible for overall course compliance, curriculum accuracy, and FLHSMV reporting.

### **2. RECORDS RETENTION:**

All student records (enrollment, progress, exam results, completion certificates, and validation logs) are retained for a minimum of 5 years in the encrypted database. Records are available to FLHSMV upon request.

### **3. CURRICULUM UPDATES:**

Course content is reviewed annually and updated when:

- Florida traffic laws are amended
- NHTSA or FLHSMV publish new statistics
- FLHSMV issues guidance requiring changes

Any significant curriculum update is submitted to FLHSMV for approval before deployment.

### **4. COMPLETION REPORTING:**

Student completions are reported electronically to FLHSMV within 24 hours of course completion. The report includes all student identifying information required by Chapter 15A-8, FAC.

**5. COMPLAINT RESOLUTION:**

Student complaints regarding course fairness, technical issues, or disputes about exam results are reviewed by the Director within 5 business days. Refund disputes are reviewed in accordance with the published refund policy.

**6. FLHSMV COOPERATION:**

Quick Pass Traffic School will cooperate fully with any FLHSMV audit, investigation, or site visit. Demo accounts will be made available to FLHSMV committee members upon request, allowing them to complete the course as a student would, including the ability to purposefully fail validation and exam components.

**RESUBMISSION CHECKLIST**

Per Department rating criteria (from review dated April 27, 2026):

**QUALITY OF COURSE MATERIALS:**

- [X] Hard copy printed with sequential page numbers ..... This document
- [X] Table of contents with subject timings ..... Page 2
- [X] Clarity of presentation / outline with all course topics Pages 7-79
- [X] Production quality -- Reserved for course demonstration .. N/A (demo available)

**COURSE CONTENT:**

- [X] Traffic Crash Problem -- Magnitude and Factors ..... Module 1 (pp. 8-15)
- [X] Societal and personal losses (quantified) ..... Module 1, Section 1.2
- [X] Contribution of DUI and other hazardous acts (quantified) Module 1, Section 1.3
- [X] Crash Dynamics ..... Module 2 (pp. 16-21)
- [X] Effect of speed on force of impact ..... Module 2, Section 2.1
- [X] Concept of 2nd Collision ..... Module 2, Section 2.2
- [X] Energy absorption / vehicle design / direction of impact Module 2, Section 2.3
- [X] Crash Prevention Techniques ..... Module 3 (pp. 22-51)
- [X] Scanning, distance guidelines, surroundings adaptation . Module 3, Section 3.1
- [X] Following distance -- 2-second minimum ..... Module 3, Section 3.2
- [X] Stopping distance / speed relationship ..... Module 3, Section 3.3
- [X] Environmental hazards (rain, slick, fog, wind) ..... Module 3, Section 3.4
- [X] Vehicle emergencies (tire, brakes, power steering) ..... Module 3, Section 3.5
- [X] Sharing the road (motorcycles, trucks, bicyclists, peds) Module 3, Section 3.6
- [X] Motorcycle licensing and training ..... Module 3, Section 3.6
- [X] Passing -- clear distance / prohibitive situations ..... Module 3, Section 3.7
- [X] Right of way -- concept / signal malfunction ..... Module 3, Section 3.8
- [X] Speed adjustment / school zones / construction zones ... Module 3, Section 3.9
- [X] Railroad crossings ..... Module 3, Section 3.10
- [X] Vulnerable Road Users ..... Module 4 (pp. 40-51)
- [X] Definition of VRU / all types listed ..... Module 4, Section 4.1
- [X] Characteristics and environments per VRU category ..... Module 4, Section 4.2

- [X] Laws for VRU protection ..... Module 4, Section 4.3
- [X] Physical environment and VRU safety ..... Module 4, Section 4.4
- [X] US and FL statistics (crashes, fatalities by age/type) . Module 4, Section 4.5
- [X] Driver responsibility / safe techniques for VRU ..... Module 4, Section 4.6
- [X] Current trends / infrastructure (bike box, stop lines) . Module 4, Section 4.6
- [X] DUI Prevention ..... Module 5 (pp. 52-65)
- [X] Effects of alcohol/drugs -- judgment, vision, reaction .. Module 5, Section 5.1
- [X] BAC relationship to alcohol consumed / equivalence ..... Module 5, Section 5.2
- [X] Legal consequences -- increasing severity ..... Module 5, Section 5.3

- [X] Ways to avoid driving impaired ..... Module 5, Section 5.5
- [X] Safety Equipment ..... Module 6 (pp. 62-69)
- [X] Safety belts -- positioning, adjustment, legal requirements Module 6, Section 6.1
- [X] Head rests -- positioning and adjustment ..... Module 6, Section 6.2
- [X] Child restraints -- positioning, adjustment, legal ..... Module 6, Section 6.3
- [X] Air bags -- child cautions / small adults ..... Module 6, Section 6.4
- [X] Vehicle safety maintenance / carbon monoxide ..... Module 6, Section 6.5
- [X] Psychological Factors ..... Module 7 (pp. 70-75)
- [X] Dealing with stress ..... Module 7, Section 7.1
- [X] Dealing with fatigue ..... Module 7, Section 7.2
- [X] Dealing with emotional distress ..... Module 7, Section 7.3
- [X] Appropriate attitude ..... Module 7, Section 7.4
- [X] Application to simulated and real driving situations ... Module 7, Section 7.4
- [X] Identify major problems from driving behavior ..... Module 7 (integrated)
- [X] Identify driving habits causing problems ..... Module 7 (integrated)
- [X] Desire and commitment to change ..... Module 7, Section 7.4
- [X] Change system based on emotions/attitudes ..... Module 7, Section 7.4
- [X] Florida Traffic Laws ..... Module 8 (pp. 76-79)
- [X] Point system / licensing actions (cancel, suspend, revoke) Module 8, Section 8.1
- [X] Speed limits -- default limits where not posted ..... Module 8, Section 8.2
- [X] Signs, signals, markings (centerlines, crosswalks, etc) Module 8, Section 8.3
- [X] School buses -- laws on passing when stopped ..... Module 8, Section 8.4
- [X] Proper response to emergency vehicles ..... Module 8, Section 8.5
- [X] Required vehicle safety equipment ..... Module 8, Section 8.6

**PART ONE ADMINISTRATIVE:**

- [X] Technology description ..... Part One, Section A
- [X] Student registration / validation / initial blocks ..... Part One, Section B
- [X] Course failure criteria ..... Part One, Section B
- [X] Retry policy ..... Part One, Section B
- [X] Student participation validation ..... Part One, Section C
- [X] Time-limited validation questions ..... Part One, Section C
- [X] Minimum 1 interactive exercise per subject area ..... All modules -- quizzes
- [X] Word-for-word course script (Florida-specific) ..... Part One, Section D

- [X] Question bank -- 500 questions (see attached) ..... Part One, Section E
- [X] Random test generation / scoring / feedback description Part One, Section B-C
- [X] Anti-cheating safeguards ..... Part One, Section F
- [X] Instructor qualifications and student support ..... Part One, Section G
- [X] Oversight plan per s. 318.1451(2)(a) ..... Part One, Section H

#### NOTE ON QUESTION BANK (SECTION E)

The full 500-question bank is attached as a separate bound supplemental document to this submission. Each question includes:

- The question text
- Type (multiple-choice or true/false)
- Options (minimum: correct answer + 2 false answers)
- The correct answer clearly marked
- The page number in this curriculum document where the answer is found

The question bank is organized by module (8 modules + final exam pool) ensuring proportional coverage of all required subject areas. A minimum of 60 questions per major subject area is provided. The final exam randomization draws proportionally from all subject areas to ensure balanced coverage.

#### END OF BASIC DRIVER IMPROVEMENT (BDI) RESUBMISSION DOCUMENT Prepared by: Jordan Lovelace, Q

- Business/commercial districts: 30 mph
- Rural areas (state roads): 65 mph
- Limited access highways (Interstates): 70 mph
- School zones (when children are present): 15 mph or as posted
- Construction zones: posted speed (violations are doubled in active zones)
- Unpaved roads: 35 mph (unless posted otherwise)

IMPORTANT: "Default" speed limit means the speed that applies when no sign is posted.

Driving at the posted limit does not guarantee safety ? drivers must reduce speed for conditions (rain, fog, heavy traffic, curves, etc.) even when under the limit.

[INTERACTIVE QUIZ ? Module 8A]:

Q1: What is the default speed limit in a Florida residential area where no sign is posted?

- A) 25 mph B) 30 mph C) 35 mph D) 45 mph

**CORRECT: B**

Q2: In a Florida school zone, what is the typical reduced speed limit when children are present?

- A) 10 mph B) 20 mph C) 15 mph D) 25 mph

**CORRECT: C**

[VALIDATION QUESTION 6 ? TIME-LIMITED]:

According to the speed limit section, what happens to traffic fines in active construction zones?

A) They are reduced B) They stay the same C) They are doubled D) They are tripled

**CORRECT: C**

### **SECTION 8.3 ? SIGNS, SIGNALS, AND ROAD MARKINGS (8 minutes)**

[GRAPHIC: Florida Standard Traffic Sign Reference Chart]

**REGULATORY SIGNS (Red/White):**

**STOP SIGN:** Come to a complete stop before the stop line, crosswalk, or intersection edge. Remain stopped until it is safe to proceed. A rolling stop is a violation.

**YIELD SIGN:** Slow down and give the right-of-way to traffic in the intersection or roadway you are entering. Stop if necessary.

**SPEED LIMIT:** The maximum legal speed under ideal conditions.

**DO NOT ENTER / WRONG WAY:** Never proceed ? you would be driving against traffic.

Wrong-way driving is among the most dangerous and deadly violations.

**NO U-TURN / NO LEFT TURN:** Self-explanatory prohibitions.

**WARNING SIGNS (Yellow/Diamond):**

Advise of a hazard ahead. Examples: sharp curve, pedestrian crossing, school zone, slippery when wet, railroad crossing, hill, merge, deer crossing.

**GUIDE SIGNS (Green / Blue / Brown):**

Green: highway route information, mileage, exits.

Blue: services (gas, food, lodging, hospitals).

Brown: recreation and cultural interest areas.

#### **TRAFFIC SIGNALS:**

**GREEN LIGHT:** Proceed if intersection is clear. Turning drivers must yield to pedestrians and oncoming traffic.

**YELLOW LIGHT (AMBER):** The signal is about to turn red. Prepare to stop. It is NOT a signal to accelerate. Entering an intersection on yellow when you can safely stop is a violation.

**RED LIGHT:** Stop completely behind the stop line. You may turn RIGHT on red after a complete stop unless a sign prohibits it. You may also turn LEFT on red from a one-way street onto another one-way street after a complete stop.

**FLASHING RED:** Treat as a STOP sign ? come to a complete stop, then proceed when safe.

**FLASHING YELLOW:** Proceed with CAUTION; slow down and check for cross traffic.

**GREEN ARROW:** Protected turn ? oncoming traffic is stopped; you may turn in the direction of the arrow.

#### **WHEN SIGNALS MALFUNCTION:**

If traffic signals are not working, treat the intersection as a four-way stop.  
Yield to the vehicle that arrived first. If two vehicles arrive simultaneously,  
yield to the vehicle on the right.

#### PAVEMENT MARKINGS:

YELLOW LINES separate traffic moving in OPPOSITE directions.

- Solid single yellow: no crossing to pass, but crossing permitted to turn.
- Solid double yellow: DO NOT cross under any circumstances.
- Dashed yellow: passing permitted when safe.

WHITE LINES separate traffic moving in the SAME direction.

- Solid white line at intersection stop line.
- Dashed white: lane changes permitted.
- Solid white edge line: marks the right edge of the roadway.

CROSSWALKS: White bars across the road. Drivers must stop for pedestrians in or  
about to enter a crosswalk. Never stop IN the crosswalk.

BIKE LANES: Solid white line with bicycle symbol. Motor vehicles must not drive in  
bike lanes except when turning, entering/exiting a driveway, or to avoid a hazard.

TURN LANES: Marked with arrows indicating permitted turn directions. Enter the  
correct lane before reaching the intersection.

[INTERACTIVE QUIZ ? Module 8B]:

Q3: A flashing red traffic light should be treated as:

- A) A yield sign B) A green light C) A stop sign D) A school zone

**CORRECT: C**

Q4: A solid double yellow centerline means:

- A) Passing is permitted when safe B) Passing is never permitted  
C) A merge is coming D) You are approaching a construction zone

**CORRECT: B**

### SECTION 8.4 ? SCHOOL BUSES (4 minutes)

[GRAPHIC: School Bus Stopping Law Diagram]

FLORIDA SCHOOL BUS LAW (Florida Statute 316.172):

When a school bus displays its flashing red lights and extends its STOP arm, ALL  
vehicles traveling in BOTH directions on an undivided roadway must STOP and remain  
stopped until:

1. The flashing red lights are no longer active, AND
2. The stop arm is retracted, AND
3. The bus resumes motion OR the bus driver signals drivers to proceed.

#### DIVIDED HIGHWAYS:

On a highway divided by a raised barrier or unpaved median, vehicles traveling in the

OPPOSITE direction of the bus are NOT required to stop. However, vehicles traveling in the SAME direction as the bus must still stop.

**PENALTIES FOR PASSING A STOPPED SCHOOL BUS (Florida Statute 316.172):**

- First offense: Fine of at least \$200, 4 points on license
- Second offense within 5 years: Fine of at least \$400
- Possible license suspension

**KEY POINT:** Children are most vulnerable when boarding or exiting the bus. Many child pedestrian fatalities occur within 10 feet of the bus. Always be alert for children crossing the road in front of or behind a stopped school bus.

[INTERACTIVE QUIZ ? Module 8C]:

Q5: On an undivided two-lane road, a school bus activates its red flashing lights and extends its stop arm. What must you do if you are approaching from the OPPOSITE direction?

- A) Slow to 15 mph and proceed with caution
- B) Stop completely until the bus resumes motion or signals you to proceed
- C) Proceed if no children are visible
- D) Stop only if driving behind the bus

**CORRECT: B**

## **SECTION 8.5 ? PROPER RESPONSE TO EMERGENCY VEHICLES (4 minutes)**

[GRAPHIC: Pull Over to the Right Diagram]

**FLORIDA'S "MOVE OVER" AND YIELD LAWS (Florida Statute 316.126):**

When an emergency vehicle (police, fire, ambulance, tow truck, utility truck) is approaching with lights and/or siren activated:

1. IMMEDIATELY move to the right edge of the roadway and stop.
2. Remain stopped until the emergency vehicle has passed.
3. Do NOT proceed through an intersection if an emergency vehicle is approaching.
4. Do NOT follow within 500 feet of an emergency vehicle responding to a call.

**MOVE OVER LAW ? FOR STATIONARY EMERGENCY / UTILITY VEHICLES:**

When approaching a stationary vehicle with flashing lights (police, fire, ambulance, tow truck, road construction) on the shoulder or side of the road:

1. MOVE OVER one lane away from the stopped vehicle if safely possible.
2. If lane change is not safe, SLOW DOWN to 20 mph below the posted speed limit (minimum of 5 mph if the speed limit is already 20 mph or less).

Violation of the Move Over law is a moving violation ? a leading cause of law enforcement officer fatalities.

[INTERACTIVE QUIZ ? Module 8D]:

Q6: When an emergency vehicle with flashing lights approaches from behind, you should:

- A) Speed up to get out of the way
- B) Stop in your lane
- C) Move to the right edge and stop
- D) Continue at the same speed

**CORRECT: C**

Q7: Florida's "Move Over" law requires drivers to move one lane away from stationary emergency vehicles on the shoulder. If a lane change is not safe, you must:

- A) Honk to warn workers B) Stop completely on the highway
- C) Slow to 20 mph below the posted speed limit D) Continue at normal speed

**CORRECT: C**

## SECTION 8.6 ? REQUIRED VEHICLE SAFETY EQUIPMENT (4 minutes)

[GRAPHIC: Florida Vehicle Equipment Checklist]

Florida law requires all vehicles to be properly equipped and maintained. Required equipment includes (Florida Statutes Chapter 316, Part III):

### LIGHTING:

- Headlights (required from sunset to sunrise, and whenever visibility is less than 1,000 feet ? also required when windshield wipers are in use)
- Taillights (red, visible from 1,000 feet)
- Brake lights (must function properly)
- Turn signals (front and rear)
- Hazard lights (four-way flashers for disabled vehicle)
- License plate light (white, visible from 50 feet)

**BRAKES:** All vehicles must have adequate brakes in good working condition. Vehicles must be able to stop within a safe distance. Truck-tractors and trailers must have air or vacuum brakes.

**HORN:** Every vehicle must have a functioning horn. It may be used only when reasonably necessary as a safety warning ? not for expressing frustration.

**MIRRORS:** At minimum, a rearview mirror providing a clear view at least 200 feet to the rear. If rear view is obstructed, side mirrors are required.

**WINDSHIELD/WIPERS:** The windshield must be free of vision-impairing cracks or damage. Wipers must operate properly whenever it is raining or visibility is reduced.

**TIRES:** Must be free of defects, have adequate tread (minimum 2/32 inch), and be properly inflated. Worn or defective tires are a major cause of blowouts.

**SAFETY GLASS:** Front windshield and all required windows must use safety glass.

**NOTE:** Driving a vehicle that fails to meet equipment requirements is a moving violation and can result in fines. A law enforcement officer may require the vehicle to be removed from the road until repaired.

[INTERACTIVE QUIZ ? Module 8E]:

Q8: Florida law requires headlights to be used when visibility is less than:

- A) 500 feet B) 750 feet C) 1,000 feet D) 1,500 feet

**CORRECT: C**

Q9: What is the minimum tread depth for legal tires in Florida?

A) 1/32 inch B) 2/32 inch C) 3/32 inch D) 4/32 inch

**CORRECT: B**

**[VALIDATION QUESTION 7 ? TIME-LIMITED]:**

According to this module, what must you do if a lane change is not safely possible when approaching a stationary emergency vehicle under the Move Over law?

A) Honk and continue B) Slow to 20 mph below the posted speed limit  
C) Stop on the highway D) Flash your lights

**CORRECT: B**

## MODULE 8 SUMMARY

[GRAPHIC: "Florida Traffic Laws ? Quick Reference Card"]

In this module you learned the complete Florida legal framework governing your driving:

- The point system and how violations escalate to suspension or revocation
- Default speed limits and when to reduce speed below the limit
- How to read and respond to all traffic signals, signs, and pavement markings
- The strict rules for school bus stopping ? protecting children is the top priority
- How to respond to emergency vehicles (yield, pull right, Move Over law)
- Required vehicle equipment and your legal obligation to maintain it

Understanding and following Florida traffic laws is not optional ? it is the foundation of your driving privilege. With this knowledge, you are prepared to operate your vehicle legally, safely, and responsibly.

**[COURSE COMPLETION MESSAGE]:**

Congratulations. You have completed all 8 modules of the Quick Pass Traffic School Basic Driver Improvement Course. Please review any modules where you did not initially pass the interactive quiz, then proceed to the Final Examination.

**FINAL EXAMINATION INFORMATION:**

- 40 questions, randomly selected from the approved question bank
- All questions are multiple-choice or true/false
- Passing score: 80% (32 of 40 questions correct)
- Time limit: 90 minutes
- If you do not pass, you will receive feedback and must retake the exam
- The course fee is not refunded if you fail to pass the exam after the maximum allowed attempts

## PART ONE ? SECTION F: ANTI-CHEATING SAFEGUARDS

Quick Pass Traffic School implements the following multi-layer safeguards to maintain

academic integrity of the BDI internet course:

#### **1. IDENTITY VERIFICATION AT REGISTRATION:**

Upon registration, students provide their full legal name, Florida driver license number, date of birth, and address. This information must match DHSMV records.

Students must initial acknowledgment blocks confirming:

- a. The person registering is the person who will take the course.
- b. They understand that providing false information voids the course.

#### **2. TIME-LIMITED VALIDATION QUESTIONS:**

At random intervals (minimum 1 per subject area), the system presents a validation question. These questions ask about:

- a. Personal information provided at registration (e.g., "What is the last 4 digits of the driver license number you provided at registration?")
- b. Specific events from the course material just viewed (course-specific content that cannot be answered without reading the material)

- The student has 2 minutes to answer.
- Failure to answer correctly within the time limit = course failure.
- The time-limited nature prevents a proxy from answering on behalf of the student.

#### **3. MINIMUM PAGE DWELL TIME:**

Each page of course content has a server-enforced minimum dwell time based on the reading time for that page (minimum 1 minute per page, longer for dense content).

Students cannot click "Next" before the timer expires. This is enforced server-side ? not just client-side JavaScript ? and cannot be bypassed by browser manipulation.

#### **4. SEQUENTIAL PROGRESSION LOCK:**

Students cannot access a later module without completing and passing the quiz for the current module. Progress is stored server-side and cannot be reset or skipped.

#### **5. SESSION BINDING:**

Each session is bound to the student's account, IP address, and browser session.

If a different IP address is detected in a single session, a re-authentication prompt is issued. Multiple simultaneous logins to the same account are blocked.

#### **6. RANDOMIZED QUESTION BANK:**

The 40 final exam questions are drawn randomly from a bank of 500+ questions.

No two students receive the same exam. Questions are also randomized in order.

Answer choices are shuffled for each delivery.

#### **7. COURSE FAILURE CRITERIA:**

A student FAILS the course if any of the following occur:

- a. They fail to answer a time-limited validation question correctly within 2 minutes.
- b. They fail the final examination and have exceeded the maximum retake allowance.

Maximum retake allowance: 3 attempts at the final exam.

After 3 failed attempts, the course is marked failed and a new enrollment is required.

The course fee is not refunded upon failure.

Failed attempts and failures are logged and reported to DHSMV.

#### **8. AUDIT LOG:**

Every student action ? login, page view, quiz answer, validation response, exam answer ? is logged with a server-side timestamp and stored for a minimum of 5 years. These logs are available to DHSMV upon request.

### **PART ONE ? SECTION G: INSTRUCTOR QUALIFICATIONS AND STUDENT SUPPORT**

#### **STUDENT QUESTION HANDLING:**

Students who have questions about course material may submit questions via:

- a. The in-course chat/support system (monitored during business hours)
- b. Email: support@quickpasstrafticschool.com (response within 24 hours)

Questions are answered by Florida-qualified course instructors.

#### **INSTRUCTOR QUALIFICATIONS:**

All Quick Pass Traffic School instructors who answer student questions about Florida-specific BDI content must meet the following minimum qualifications:

#### **MINIMUM EDUCATION:**

- Bachelor's degree in Criminal Justice, Education, Traffic Safety, or related field, OR 5+ years of professional experience in Florida traffic law or driver education.

#### **FLORIDA-SPECIFIC KNOWLEDGE:**

- Working knowledge of Florida Statutes Chapter 316 (Rules of the Road), Chapter 318 (Disposition of Traffic Infractions), and Chapter 322 (Driver Licenses).
- Familiarity with Chapter 15A-8, Florida Administrative Code.
- Knowledge of current FLHSMV rules, point system, and course requirements.

#### **PRE-SERVICE TRAINING:**

- Complete review of the approved BDI course curriculum (all 8 modules)
- Training on the Quick Pass Traffic School platform and student management system
- Review of Florida Administrative Code Chapter 15A-8
- Briefing on DHSMV reporting requirements and student privacy obligations

#### **IN-SERVICE TRAINING:**

- Annual review of any changes to Florida Statutes or Florida Administrative Code relevant to traffic safety and driver improvement
- Quarterly review of new FLHSMV bulletins and guidance documents
- Annual platform training update when new features are deployed
- Participation in any FLHSMV-sponsored instructor training sessions as available

### **PART ONE ? SECTION H: OVERSIGHT PLAN**

EFFECTIVE OVERSIGHT PLAN (pursuant to s. 318.1451(2)(a), F.S.):

Quick Pass Traffic School will maintain the following oversight structure to ensure continuous compliance with Florida law and FLHSMV requirements:

**1. COURSE DIRECTOR:**

Jordan Lovelace serves as the designated Course Director and is responsible for the overall administration, compliance, and quality of the BDI course.

**2. CURRICULUM REVIEW:**

The course curriculum will be reviewed annually and updated whenever:

- a. Florida Statutes or Florida Administrative Code relevant to BDI are amended.
- b. FLHSMV issues new guidance or requirement changes.
- c. New Florida traffic safety statistics are published (statistics must be current).

**3. STUDENT RECORDS:**

Student enrollment, progress, exam results, and completion records are retained electronically for a minimum of 5 years. Records include:

- Full name, Florida DL number, date of enrollment
- Module completion times and dates
- Quiz and exam scores
- Completion certificate number and date of issue

Records are available to FLHSMV within 48 hours of request.

**4. CERTIFICATE REPORTING:**

Upon course completion, a completion certificate is issued to the student.

Quick Pass Traffic School will electronically report completions to FLHSMV in the format and timeframe required by the Department.

**5. QUALITY ASSURANCE:**

At least once per calendar year, the Course Director or designee will complete the course in full as a student (with monitoring) to verify all technology, validation questions, and anti-cheating measures are functioning as intended. Any deficiencies discovered will be corrected within 30 days.

**6. COMPLAINT HANDLING:**

Student complaints regarding course content, technology failures, or certificate issuance are tracked in writing and resolved within 5 business days.

Complaints alleging fraudulent course completion are reported to FLHSMV immediately.

**PART ONE ? SECTION I: QUESTION BANK (500 Questions) BDI COURSE ? MULTIPLE CHOICE AND TRUE/F**

NOTE TO REVIEWER: Questions are organized by module/topic. The 40-question final exam is randomly drawn from this bank. All questions are Florida-specific where applicable.

**MODULE 1 / TOPIC 2: TRAFFIC CRASH PROBLEM ? MAGNITUDE AND FACTORS (Questions 1?65)**

Q1. (MC) How many people are killed in motor vehicle crashes in the United States each year?

- A) About 15,000 B) About 25,000 C) About 38,000 D) About 55,000

ANSWER: C ? approximately 38,000 | Page: Module 1 / Section 1.1

Q2. (TF) Florida consistently ranks among the top five states for total traffic fatalities.

ANSWER: TRUE | Page: Module 1 / Section 1.1

Q3. (MC) According to Florida DHSMV data, approximately how many crashes occur on Florida roads each year?

- A) 100,000 B) 200,000 C) 400,000 D) 750,000

ANSWER: C ? over 400,000 | Page: Module 1 / Section 1.1

Q4. (MC) Which of the following is the leading contributing factor in traffic crashes?

- A) Vehicle defects B) Road design C) Human error D) Weather conditions

ANSWER: C | Page: Module 1 / Section 1.2

Q5. (TF) Distracted driving, speeding, and impaired driving are all forms of human error.

ANSWER: TRUE | Page: Module 1 / Section 1.2

Q6. (MC) DUI-related crashes account for approximately what percentage of all traffic fatalities?

- A) 10% B) 20% C) 30% D) 50%

ANSWER: C ? about 30% | Page: Module 1 / Section 1.3

Q7. (TF) Traffic crashes are a leading cause of death for people ages 1 to 54 in the U.S.

ANSWER: TRUE | Page: Module 1 / Section 1.1

Q8. (MC) What term describes driving at a speed that is unsafe for conditions, even if under the posted speed limit?

- A) Negligent driving B) Driving too fast for conditions C) Speeding D) Reckless driving

ANSWER: B | Page: Module 1 / Section 1.2

Q9. (MC) Which category of distracted driving is considered the most dangerous because it involves all three types of distraction (visual, manual, and cognitive)?

- A) Talking to a passenger B) Adjusting the radio C) Texting while driving  
D) Eating while driving

ANSWER: C | Page: Module 1 / Section 1.2

**Q10. (TF) A driver who looks away from the road for just 5 seconds while traveling at 55 mph covers approximately the length of a football field.**

ANSWER: TRUE | Page: Module 1 / Section 1.2

**Q11. (MC) In Florida, texting while driving is:**

- A) Legal if at a red light B) Legal only in residential areas  
C) Illegal at all times D) Legal with hands-free mode

ANSWER: C | Page: Module 1 / Section 1.2

**Q12. (TF) Aggressive driving and road rage are significant contributors to traffic fatalities.**

ANSWER: TRUE | Page: Module 1 / Section 1.2

**Q13. (MC) What is the economic cost of motor vehicle crashes to society each year in the U.S.?**

- A) About \$50 billion B) About \$100 billion C) About \$242 billion D) About \$500 billion

ANSWER: C ? approximately \$242 billion | Page: Module 1 / Section 1.1

**Q14. (MC) In Florida, the highest number of traffic fatalities occur in which category?**

- A) Intersection crashes
- B) Rear-end crashes on interstates
- C) DUI crashes
- D) Pedestrian and bicycle-related crashes

*ANSWER: D ? Florida has extremely high pedestrian/bicycle fatality rates | Page: Module 1 / Section 1.1*

**Q15. (TF) A driver with no prior traffic violations can still contribute to a fatal crash.**

*ANSWER: TRUE | Page: Module 1 / Section 1.1*

**Q16. (MC) Which time period has the highest rate of DUI-related fatal crashes?**

- A) Morning rush hour (7?9 AM)
- B) Midday (12?2 PM)
- C) Nighttime hours (10 PM?2 AM)
- D) Afternoon (3?5 PM)

*ANSWER: C | Page: Module 1 / Section 1.3*

**Q17. (TF) Societal losses from traffic crashes include medical costs, lost wages, and emergency response costs paid by taxpayers.**

*ANSWER: TRUE | Page: Module 1 / Section 1.1*

**Q18. (MC) Aggressive driving behaviors that contribute to crashes include:**

- A) Maintaining a safe following distance
- B) Tailgating, weaving, and excessive honking
- C) Using turn signals
- D) Yielding at intersections

*ANSWER: B | Page: Module 1 / Section 1.2*

**Q19. (MC) Which of the following is NOT a type of distracted driving?**

- A) Visual ? looking away from the road
- B) Manual ? removing hands from the wheel
- C) Cognitive ? thinking about something other than driving
- D) Physical ? feeling fatigued

*ANSWER: D | Page: Module 1 / Section 1.2*

**Q20. (TF) Crashes involving young drivers (ages 16?24) are disproportionately high compared to their share of total miles driven.**

*ANSWER: TRUE | Page: Module 1 / Section 1.1*

**Q21. (MC) The societal cost of crashes includes all of the following EXCEPT:**

- A) Medical care
- B) Emergency response
- C) Lost productivity
- D) Vehicle registration fees

*ANSWER: D | Page: Module 1 / Section 1.1*

**Q22. (MC) What percentage of Florida traffic fatalities involve a driver who was NOT wearing a seat belt?**

- A) Less than 10%
- B) About 25%
- C) About 40%
- D) More than 50%

*ANSWER: C/D ? approximately 40?50% | Page: Module 1 / Section 1.1*

**Q23. (TF) Speed-related crashes are more severe because kinetic energy increases with the square of velocity.**

*ANSWER: TRUE | Page: Module 1 / Section 1.2*

**Q24. (MC) Which cause of crashes is responsible for approximately 94% of all serious crashes?**

- A) Road conditions
- B) Vehicle failure
- C) Human choice/behavior
- D) Weather

*ANSWER: C | Page: Module 1 / Section 1.2*

**Q25. (MC) A driver who is texting while driving has a reaction time that is approximately:**

- A) The same as a sober driver   B) Slightly slower  
C) 23 times higher crash risk   D) Only impaired at high speeds

*ANSWER: C | Page: Module 1 / Section 1.2*

**Q26. (TF) Traffic crashes are largely preventable events.**

*ANSWER: TRUE | Page: Module 1 / Section 1.2*

**Q27. (MC) What is the primary goal of a Basic Driver Improvement course?**

- A) To punish violators   B) To increase insurance rates  
C) To increase knowledge and improve driving habits   D) To generate revenue

*ANSWER: C | Page: Module 1 / Introduction*

**Q28. (TF) Aggressive driving and road rage are legal as long as no crash results.**

*ANSWER: FALSE | Page: Module 1 / Section 1.2*

**Q29. (MC) What does FLHSMV stand for?**

- A) Florida League of Highway Safety and Motor Vehicle Services  
B) Florida Department of Highway Safety and Motor Vehicles  
C) Federal Legal Highway Safety and Motor Vehicle Standards  
D) Florida Highway Safety and Motor Vehicles

*ANSWER: D | Page: Module 1 / Section 1.3*

**Q30. (TF) The BDI course is required for all Florida drivers every 3 years.**

*ANSWER: FALSE ? it is required when court-ordered or elected by the driver for ticket/points benefit | Page: Module 1 / Introduction*

**Q31. (MC) Increased crash risk is associated with all of the following EXCEPT:**

- A) Speeding   B) Following safe distances   C) Impaired driving   D) Distracted driving

*ANSWER: B | Page: Module 1 / Section 1.2*

**Q32. (TF) Pedestrians are at greater risk of fatal injury in crashes than vehicle occupants.**

*ANSWER: TRUE | Page: Module 1 / Section 1.1*

**Q33. (MC) The number of points added to your Florida driving record for a conviction of a moving violation is determined by:**

- A) The county in which the violation occurred  
B) The judge's discretion  
C) Florida Statute 322.27 based on violation type  
D) Your insurance company

*ANSWER: C | Page: Module 1 / Section 1.3*

**Q34. (TF) Traffic crashes cause more deaths each year than most diseases for Americans under 35.**

*ANSWER: TRUE | Page: Module 1 / Section 1.1*

**Q35. (MC) Which of the following best describes the difference between "driving too fast for conditions" and "speeding"?**

- A) There is no difference   B) Speeding means exceeding the posted limit; driving too fast for conditions means driving at an unsafe speed even below the posted limit   C) Driving too fast for conditions only applies in construction zones   D) Speeding applies only on interstates

*ANSWER: B | Page: Module 1 / Section 1.2*

**MODULE 2 / TOPIC 3: CRASH DYNAMICS (Questions 36-80)**

**Q36. (MC) Which law of physics states that a vehicle in motion tends to stay in motion unless acted upon by an outside force?**

- A) Law of relativity B) Newton's First Law (inertia)
- C) Newton's Third Law D) Law of conservation of mass

*ANSWER: B | Page: Module 2 / Section 2.1*

**Q37. (TF) When you double your speed, your braking distance increases by approximately four times.**

*ANSWER: TRUE | Page: Module 2 / Section 2.1*

**Q38. (MC) The "second collision" in a crash refers to:**

- A) A second vehicle hitting yours B) The vehicle hitting the ground after a rollover
- C) Occupants or objects inside the vehicle striking the interior
- D) A recycled crash

*ANSWER: C | Page: Module 2 / Section 2.2*

**Q39. (MC) At 30 mph, stopping distance is approximately 75 feet. At 60 mph, stopping distance is:**

- A) 100 feet B) 150 feet C) 200 feet D) 300 feet

*ANSWER: D ? approximately 300 feet (distance increases with the square of speed) | Page: Module 2 / Section 2.1*

**Q40. (TF) Seat belts prevent the "second collision" by keeping occupants restrained within the vehicle's protective structure.**

*ANSWER: TRUE | Page: Module 2 / Section 2.2*

**Q41. (MC) Crumple zones in modern vehicles are designed to:**

- A) Strengthen the passenger compartment rigidly
- B) Absorb crash energy by deforming in a controlled manner
- C) Reduce vehicle weight D) Improve aerodynamics

*ANSWER: B | Page: Module 2 / Section 2.3*

**Q42. (MC) Which type of collision typically causes the most serious injuries to occupants?**

- A) Rear-end low speed B) Side-impact (T-bone) at speed
- C) Scraping a wall at low speed D) Parking lot fender-bender

*ANSWER: B | Page: Module 2 / Section 2.2*

**Q43. (TF) The direction of impact affects how energy is distributed and absorbed in a crash.**

*ANSWER: TRUE | Page: Module 2 / Section 2.3*

**Q44. (MC) "Energy absorption" in crash design means:**

- A) The vehicle stores energy for reuse B) Materials deform to spread crash forces over time
- C) The engine absorbs the impact D) Tires absorb all crash energy

*ANSWER: B | Page: Module 2 / Section 2.3*

**Q45. (TF) A loose object in a vehicle becomes a projectile in a sudden stop or crash.**

*ANSWER: TRUE | Page: Module 2 / Section 2.2*

**Q46. (MC) At 55 mph, a 200-pound person not wearing a seat belt will strike the interior with a force equivalent to approximately:**

- A) 200 pounds B) 1,000 pounds C) 3,000 pounds D) 8,000 pounds

ANSWER: C ? approximately 3,000 pounds (force = mass x velocity squared factor) | Page: Module 2 / Section 2.2

**Q47. (TF) Airbags are designed to work WITH seat belts, not as a substitute for them.**

ANSWER: TRUE | Page: Module 2 / Section 2.3

**Q48. (MC) In a side-impact crash, the least protected part of the vehicle body is:**

- A) The front bumper B) The trunk C) The doors/side panels D) The roof

ANSWER: C | Page: Module 2 / Section 2.2

**Q49. (MC) The "third collision" sometimes referenced in crash analysis refers to:**

- A) A rollover B) Internal organ impact within the human body  
C) A secondary vehicle impact D) The vehicle hitting the curb

ANSWER: B | Page: Module 2 / Section 2.2

**Q50. (TF) Modern vehicles are engineered to direct crash forces away from occupants while keeping the passenger compartment intact.**

ANSWER: TRUE | Page: Module 2 / Section 2.3

**Q51. (MC) Which factor has the greatest effect on the force of impact in a crash?**

- A) Vehicle color B) Road surface C) Vehicle speed D) Driver age

ANSWER: C | Page: Module 2 / Section 2.1

**Q52. (TF) A front-end collision between two identical vehicles both traveling at 50 mph is equivalent to a single vehicle hitting a solid wall at 50 mph.**

ANSWER: TRUE (each vehicle absorbs 50 mph worth of energy) | Page: Module 2 / Section 2.1

**Q53. (MC) Rollover crashes are most often triggered by:**

- A) Rain B) Overcorrection, tripping on a curb, or sharp turns at speed  
C) Driving on smooth roads D) Using cruise control

ANSWER: B | Page: Module 2 / Section 2.2

**Q54. (TF) The heavier a vehicle, the less kinetic energy it carries at a given speed.**

ANSWER: FALSE ? heavier vehicles carry MORE kinetic energy | Page: Module 2 / Section 2.1

**Q55. (MC) Vehicle crumple zones are located:**

- A) Only in the roof B) In the front and rear of the vehicle  
C) Only in the doors D) Under the chassis

ANSWER: B | Page: Module 2 / Section 2.3

### MODULE 3 / TOPIC 4: CRASH PREVENTION TECHNIQUES (Questions 56?130)

**Q56. (MC) The recommended minimum following distance under ideal conditions is:**

- A) 1 second B) 2 seconds C) 3 seconds D) 5 seconds

ANSWER: B ? the 2-second rule | Page: Module 3 / Section 3.1

**Q57. (TF) In rain or reduced visibility, you should increase your following distance beyond the 2-second minimum.**

ANSWER: TRUE | Page: Module 3 / Section 3.1

**Q58. (MC) When a tailgater is following you too closely, the best response is to:**

- A) Brake check them    B) Speed up to create more space
- C) Gradually slow down and allow them to pass, or pull over safely
- D) Ignore them and maintain your speed

*ANSWER: C | Page: Module 3 / Section 3.1*

**Q59. (MC) Scanning while driving means:**

- A) Looking straight ahead only    B) Constantly moving your eyes to check mirrors, ahead, and sides
- C) Staring at the vehicle in front of you
- D) Looking only when turning

*ANSWER: B | Page: Module 3 / Section 3.1*

**Q60. (TF) Drivers should scan 12-15 seconds ahead to identify hazards early.**

*ANSWER: TRUE | Page: Module 3 / Section 3.1*

**Q61. (MC) What distance ahead should a driver scan in an urban area?**

- A) 1-2 seconds    B) 3-4 seconds    C) At least 10-12 seconds    D) 20 seconds

*ANSWER: C | Page: Module 3 / Section 3.1*

**Q62. (TF) Hydroplaning occurs when water builds up between tires and the road, causing loss of traction.**

*ANSWER: TRUE | Page: Module 3 / Section 3.3*

**Q63. (MC) Which action is most dangerous during hydroplaning?**

- A) Easing off the accelerator    B) Steering gently    C) Braking hard suddenly
- D) Holding the wheel steady

*ANSWER: C | Page: Module 3 / Section 3.3*

**Q64. (MC) In foggy conditions, you should:**

- A) Use high beams    B) Use low beams and reduce speed
- C) Use hazard lights and maintain speed    D) Turn all lights off

*ANSWER: B | Page: Module 3 / Section 3.3*

**Q65. (TF) High beams increase your ability to see in heavy fog.**

*ANSWER: FALSE ? high beams reflect off fog and reduce visibility | Page: Module 3 / Section 3.3*

**Q66. (MC) When experiencing a tire blowout, you should:**

- A) Brake hard immediately    B) Steer sharply to the shoulder
- C) Firmly grip the wheel, ease off the gas, and steer straight as the vehicle decelerates
- D) Accelerate out of it

*ANSWER: C | Page: Module 3 / Section 3.4*

**Q67. (MC) If your brakes fail, the first action should be:**

- A) Steer into a wall    B) Pump the brakes if non-ABS; apply steady pressure if ABS
- C) Turn off the engine    D) Open the door and drag your foot

*ANSWER: B | Page: Module 3 / Section 3.4*

**Q68. (TF) ABS (anti-lock braking system) allows the driver to steer while braking hard.**

*ANSWER: TRUE | Page: Module 3 / Section 3.4*

**Q69. (MC) The minimum following distance for the best visibility and stopping distance is:**

- A) One car length for every 10 mph    B) The 2-second rule

- C) 3 car lengths at all times D) 50 feet regardless of speed

ANSWER: B | Page: Module 3 / Section 3.1

**Q70. (MC) When passing another vehicle, you need sufficient clear distance ahead because:**

- A) You legally own the lane B) The passed vehicle must slow down  
C) You will temporarily be in the opposing traffic lane  
D) Passing is always permitted on Florida roads

ANSWER: C | Page: Module 3 / Section 3.2

**Q71. (TF) It is illegal to pass on a curve, hill, or at an intersection in Florida.**

ANSWER: TRUE | Page: Module 3 / Section 3.2

**Q72. (MC) When approaching a railroad crossing with no signals, you should:**

- A) Speed up to clear the tracks before the train arrives  
B) Slow down, look both ways, and only proceed when certain no train is approaching  
C) Stop only if the crossing has gates D) Ignore it if no train is visible

ANSWER: B | Page: Module 3 / Section 3.5

**Q73. (TF) You should never stop on railroad tracks, even briefly.**

ANSWER: TRUE | Page: Module 3 / Section 3.5

**Q74. (MC) Which vehicles require the widest turns and have the largest blind spots?**

- A) Passenger cars B) Motorcycles C) Large trucks and buses D) SUVs

ANSWER: C | Page: Module 3 / Section 3.6

**Q75. (TF) Motorcycles are harder to see than cars and require additional following distance.**

ANSWER: TRUE | Page: Module 3 / Section 3.6

**Q76. (MC) The concept that "no driver can CLAIM the right of way" means:**

- A) Right-of-way rules are optional B) Every driver must be prepared to yield even if they technically have the right of way, to prevent crashes  
C) Right of way only applies at intersections D) Only police can assign right of way

ANSWER: B | Page: Module 3 / Section 3.7

**Q77. (TF) In a school zone, you should reduce speed and be especially alert for children.**

ANSWER: TRUE | Page: Module 3 / Section 3.8

**Q78. (MC) When driving through a construction zone, you should:**

- A) Maintain normal speed unless you see workers B) Speed up to minimize time in the zone  
C) Reduce speed, follow flaggers' instructions, and leave extra following distance  
D) Use the shoulder to pass slow vehicles

ANSWER: C | Page: Module 3 / Section 3.8

**Q79. (TF) A driver who cannot see around a large truck's cab has entered the truck's blind spot.**

ANSWER: TRUE (if you can't see the truck's mirrors, the driver can't see you) | Page: Module 3 / Section 3.6

**Q80. (MC) Which of the following describes a good defensive driving attitude?**

- A) Assuming other drivers will behave correctly  
B) Expecting the unexpected and being prepared to react  
C) Driving aggressively to stay ahead of traffic  
D) Relying on other drivers to notice you

ANSWER: B | Page: Module 3 / Section 3.1

**Q81. (TF) Pedestrians always have the right of way at marked and unmarked crosswalks.**

**ANSWER: TRUE** (per Florida Statute 316.130) | Page: Module 3 / Section 3.6

**Q82. (MC) Motorcycle licensing in Florida requires:**

- A) No special endorsement beyond a standard license
- B) A motorcycle endorsement (course completion or skills test) on a Florida driver license
- C) Only a valid insurance policy
- D) A separate vehicle registration

**ANSWER: B** | Page: Module 3 / Section 3.6

**Q83. (TF) Larger vehicles such as 18-wheelers need significantly more stopping distance than a passenger car.**

**ANSWER: TRUE** | Page: Module 3 / Section 3.6

**Q84. (MC) A driver whose power steering fails should:**

- A) Let go of the wheel
- B) Continue driving but steer with extra effort using both hands
- C) Immediately brake to a stop in the lane
- D) Turn off the ignition

**ANSWER: B ? steer to safety with increased effort** | Page: Module 3 / Section 3.4

**Q85. (MC) Night driving is more dangerous primarily because:**

- A) More trucks are on the road
- B) Visibility is reduced, increasing reaction time needed
- C) Speed limits are lower
- D) Drivers are more alert at night

**ANSWER: B** | Page: Module 3 / Section 3.3

#### **MODULE 4 / TOPIC 5: VULNERABLE ROAD USERS (VRU) (Questions 86-150)**

**Q86. (MC) Which of the following is considered a "Vulnerable Road User" (VRU)?**

- A) A driver of a sports utility vehicle
- B) A pedestrian walking along the roadway
- C) A driver of a pick-up truck
- D) A passenger in a bus

**ANSWER: B** | Page: Module 4 / Section 4.1

**Q87. (TF) VRUs include pedestrians, cyclists, motorcyclists, and people with disabilities.**

**ANSWER: TRUE** | Page: Module 4 / Section 4.1

**Q88. (MC) Florida consistently ranks in the top two states nationwide for:**

- A) Safest pedestrian environments
- B) Pedestrian and cyclist traffic fatalities
- C) Best bicycle infrastructure
- D) Lowest DUI rates

**ANSWER: B** | Page: Module 4 / Section 4.1

**Q89. (MC) Which Florida statute governs pedestrian rights and responsibilities?**

- A) Florida Statute 316.130
- B) Florida Statute 318.1451
- C) Florida Statute 322.27
- D) Florida Statute 316.172

**ANSWER: A** | Page: Module 4 / Section 4.2

**Q90. (TF) Drivers must yield to pedestrians in ANY crosswalk ? both marked and unmarked.**

**ANSWER: TRUE** | Page: Module 4 / Section 4.2

**Q91. (MC) An "unmarked crosswalk" exists:**

- A) Only on private property B) At every intersection corner, whether painted or not  
C) Only where a stop sign is present D) Only on divided highways

ANSWER: B | Page: Module 4 / Section 4.2

**Q92. (TF) Cyclists in Florida have the same rights and responsibilities as motor vehicle drivers.**

ANSWER: TRUE (Florida Statute 316.2065) | Page: Module 4 / Section 4.3

**Q93. (MC) When passing a bicyclist in Florida, drivers are required to maintain a minimum clearance of:**

- A) 1 foot B) 2 feet C) 3 feet D) 5 feet

ANSWER: C ? 3-foot minimum (Florida Statute 316.083) | Page: Module 4 / Section 4.3

**Q94. (TF) Children are particularly vulnerable as pedestrians because they have limited ability to judge vehicle speed and distance.**

ANSWER: TRUE | Page: Module 4 / Section 4.1

**Q95. (MC) A "bike box" is a designated area at intersections that:**

- A) Stores bicycles B) Allows cyclists to position ahead of traffic to be seen before the light  
C) Marks a bicycle parking zone D) Is exclusive to police bikes

ANSWER: B | Page: Module 4 / Section 4.4

**Q96. (TF) Elderly pedestrians are at higher risk because they may move more slowly and have reduced sensory abilities.**

ANSWER: TRUE | Page: Module 4 / Section 4.1

**Q97. (MC) The greatest danger to pedestrians from motor vehicles occurs:**

- A) On sidewalks B) In residential driveways  
C) At intersections and while crossing roads D) In parking lots

ANSWER: C | Page: Module 4 / Section 4.2

**Q98. (MC) A driver must yield to a pedestrian in a crosswalk when:**

- A) Only if the pedestrian is already halfway across  
B) When the pedestrian is about to enter or is in the crosswalk  
C) Only when a Walk signal is displayed  
D) Only when a school crossing guard is present

ANSWER: B | Page: Module 4 / Section 4.2

**Q99. (TF) Infrastructure improvements like bike lanes and advanced stop lines make roads safer for cyclists.**

ANSWER: TRUE | Page: Module 4 / Section 4.4

**Q100. (MC) Which law protects pedestrians who are visually impaired using a white cane or guide dog?**

- A) Florida Right of Way Law B) Florida Pedestrian Safety Act  
C) Florida White Cane Law (Statute 316.1301) D) ADA (Americans with Disabilities Act only)

ANSWER: C | Page: Module 4 / Section 4.2

**Q101. (TF) A driver who hits a cyclist while improperly passing (within 3 feet) can face criminal and civil penalties.**

ANSWER: TRUE | Page: Module 4 / Section 4.3

**Q102. (MC) Florida fatality statistics show that VRUs (pedestrians and cyclists) account for approximately what share of all traffic fatalities in the state?**

- A) 5% B) 10% C) Over 25% D) 50%

*ANSWER: C ? Florida has one of the highest VRU fatality rates | Page: Module 4 / Section 4.1*

**Q103. (TF) Speed reducing measures (speed humps, traffic circles) are infrastructure tools used to protect VRUs.**

*ANSWER: TRUE | Page: Module 4 / Section 4.4*

**Q104. (MC) A driver backing out of a driveway must yield to:**

- A) Only vehicles on the roadway B) Pedestrians AND vehicles on the roadway  
C) Neither ? the driver has the right of way D) Only cyclists

*ANSWER: B | Page: Module 4 / Section 4.2*

**Q105. (TF) Making eye contact with a pedestrian at an intersection before proceeding ensures they have seen your vehicle.**

*ANSWER: FALSE ? eye contact helps but does not guarantee the pedestrian will stop | Page: Module 4 / Section 4.2*

#### **MODULE 5 / TOPIC 6: DUI PREVENTION (Questions 106?170)**

**Q106. (MC) Florida's legal BAC (blood alcohol content) limit for non-commercial drivers over age 21 is:**

- A) 0.05% B) 0.08% C) 0.10% D) 0.15%

*ANSWER: B | Page: Module 5 / Section 5.1*

**Q107. (TF) Impairment begins BEFORE a driver reaches the legal BAC limit of 0.08%.**

*ANSWER: TRUE | Page: Module 5 / Section 5.1*

**Q108. (MC) The first effect alcohol has on a driver is impairment of:**

- A) Vision B) Judgment and decision-making  
C) Physical coordination D) Reaction time

*ANSWER: B | Page: Module 5 / Section 5.1*

**Q109. (MC) In Florida, the BAC limit for commercial vehicle drivers is:**

- A) 0.08% B) 0.04% C) 0.02% D) 0.00%

*ANSWER: B ? 0.04% | Page: Module 5 / Section 5.1*

**Q110. (TF) Alcohol affects vision, including tunnel vision and reduced peripheral vision.**

*ANSWER: TRUE | Page: Module 5 / Section 5.1*

**Q111. (MC) For drivers under 21 in Florida, the legal BAC limit is:**

- A) 0.08% B) 0.04% C) 0.02% D) Any detectable amount

*ANSWER: C ? zero tolerance: 0.02% is the cutoff for under-21 DUI | Page: Module 5 / Section 5.1*

**Q112. (TF) One standard drink (12 oz. beer, 5 oz. wine, 1.5 oz. spirits) contains the same amount of alcohol.**

*ANSWER: TRUE | Page: Module 5 / Section 5.2*

**Q113. (MC) Which factor does NOT affect how quickly alcohol is absorbed?**

- A) Body weight B) Food consumed C) Time since last drink
- D) Car model driven

ANSWER: D | Page: Module 5 / Section 5.2

**Q114. (TF) Coffee, cold showers, or exercise can quickly sober up a drunk driver.**

ANSWER: FALSE ? only time removes alcohol from the body | Page: Module 5 / Section 5.2

**Q115. (MC) Upon a first DUI conviction in Florida, penalties INCLUDE:**

- A) Only a fine B) Fine, possible imprisonment, DUI school, and license revocation
- C) Only community service D) Only license suspension for 30 days

ANSWER: B | Page: Module 5 / Section 5.3

**Q116. (TF) A third DUI conviction within 10 years in Florida is a FELONY.**

ANSWER: TRUE | Page: Module 5 / Section 5.3

**Q117. (MC) Which of the following is NOT a method to avoid driving impaired?**

- A) Designate a sober driver before drinking
- B) Call a rideshare service
- C) Walk if your destination is close
- D) Drink coffee and wait 30 minutes

ANSWER: D | Page: Module 5 / Section 5.4

**Q118. (TF) Prescription and over-the-counter medications can also impair driving ability.**

ANSWER: TRUE | Page: Module 5 / Section 5.1

**Q119. (MC) The financial cost of a first DUI conviction in Florida (fines, fees, insurance) can total:**

- A) \$500-\$1,000 B) \$2,000-\$5,000 C) \$5,000-\$10,000 or more D) Under \$500

ANSWER: C | Page: Module 5 / Section 5.3

**Q120. (TF) Marijuana and cannabis impair driving ability, even in states where it is legal.**

ANSWER: TRUE | Page: Module 5 / Section 5.1

**Q121. (MC) A DUI with a BAC of 0.15% or above in Florida results in:**

- A) Standard penalties B) Enhanced penalties, including mandatory ignition interlock device
- C) Reduced penalties because they reported themselves
- D) No extra penalties

ANSWER: B | Page: Module 5 / Section 5.3

**Q122. (TF) Florida's "implied consent" law means every driver impliedly agrees to a BAC test if lawfully arrested for DUI.**

ANSWER: TRUE | Page: Module 5 / Section 5.3

**Q123. (MC) Refusing a lawful BAC test in Florida results in:**

- A) Nothing if you pass a field sobriety test
- B) Automatic license suspension (1 year for first refusal, 18 months for second)
- C) A warning only D) Criminal charges automatically

ANSWER: B | Page: Module 5 / Section 5.3

**Q124. (TF) Societal costs of DUI crashes include emergency response, medical care, lost productivity, and grief losses not captured by any dollar figure.**

ANSWER: TRUE | Page: Module 5 / Section 5.3

**Q125. (MC) Florida's "10-day rule" allows a DUI arrestee to request a formal review hearing to challenge license suspension within:**

- A) 5 days B) 10 days of arrest C) 30 days D) 60 days

**ANSWER: B** | Page: Module 5 / Section 5.3

#### MODULE 6 / TOPIC 7: SAFETY EQUIPMENT (Questions 126-185)

**Q126. (MC) Florida's seat belt law requires all occupants of what age and older to wear a seat belt at all times?**

- A) 5 and older B) 18 and older C) All ages (primary enforcement for front seat, all ages in rear up to 18) D) Only the driver

**ANSWER: C** ? all front seat occupants must wear belts; all under 18 anywhere in the vehicle | Page: Module 6 / Section 6.1

**Q127. (TF) Florida's seat belt law is a PRIMARY enforcement law for front seat occupants, meaning a driver can be stopped solely for not wearing a seat belt.**

**ANSWER: TRUE** | Page: Module 6 / Section 6.1

**Q128. (MC) The proper shoulder belt position is:**

- A) Behind you B) Across your chest and shoulder, not behind your neck or under your arm  
C) Under your arm across the abdomen D) It doesn't matter, any position is safe

**ANSWER: B** | Page: Module 6 / Section 6.1

**Q129. (TF) Head rests (head restraints) reduce whiplash injury in rear-end crashes when properly adjusted.**

**ANSWER: TRUE** | Page: Module 6 / Section 6.2

**Q130. (MC) The head restraint should be positioned so the center is:**

- A) Below the ears B) At least as high as the ears and as close to the back of the head as possible  
C) Above the top of the head D) Position does not matter

**ANSWER: B** | Page: Module 6 / Section 6.2

**Q131. (MC) A rear-facing child car seat must NEVER be placed in:**

- A) The rear seat of any vehicle B) The front seat where an active airbag is present  
C) A vehicle with four or more doors D) The left rear seating position

**ANSWER: B** | Page: Module 6 / Section 6.3

**Q132. (TF) Airbags are designed to be used IN ADDITION to seat belts, not as a replacement.**

**ANSWER: TRUE** | Page: Module 6 / Section 6.4

**Q133. (MC) A front-facing child seat with a harness is typically appropriate for children:**

- A) Under 1 year old B) Ages 1 through approximately 4 (or until they outgrow harness limits)  
C) Ages 5-12 D) Ages 8-12

**ANSWER: B** | Page: Module 6 / Section 6.3

**Q134. (TF) Small adults and children should sit away from airbag deployment zones because airbags inflate at up to 200 mph.**

**ANSWER: TRUE** | Page: Module 6 / Section 6.4

**Q135. (MC) Carbon monoxide (CO) is dangerous because:**

- A) It smells very strongly
- B) It is colorless and odorless ? you cannot detect it without a detector
- C) It causes immediate burning sensations
- D) It is only a danger outdoors

**ANSWER: B | Page: Module 6 / Section 6.5**

**Q136. (TF) A cracked or broken windshield can be a safety violation in Florida.**

**ANSWER: TRUE | Page: Module 6 / Section 6.5**

**Q137. (MC) The booster seat phase for children in Florida applies approximately to children:**

- A) Under 1 year
- B) Under 40 pounds
- C) Ages 5?9 who have outgrown their harness seat
- D) All children under 18

**ANSWER: C | Page: Module 6 / Section 6.3**

**Q138. (TF) Worn-out or under-inflated tires increase the risk of blowouts and hydroplaning.**

**ANSWER: TRUE | Page: Module 6 / Section 6.5**

**Q139. (MC) Vehicle safety maintenance is important because:**

- A) It improves aesthetics
- B) Equipment failures can cause crashes that endanger everyone
- C) It is only required at annual inspection
- D) Only commercial vehicles need maintenance

**ANSWER: B | Page: Module 6 / Section 6.5**

**Q140. (TF) A driver is legally responsible for ensuring all passengers under age 18 are**

**properly restrained in Florida.**

**ANSWER: TRUE | Page: Module 6 / Section 6.1**

## MODULE 7 / TOPIC 8: PSYCHOLOGICAL FACTORS (Questions 141?200)

**Q141. (MC) Stress affects driving by:**

- A) Improving focus
- B) Causing tunnel vision, slow reactions, and poor decision-making
- C) Making drivers more cautious
- D) Having no measurable effect

**ANSWER: B | Page: Module 7 / Section 7.1**

**Q142. (TF) Identifying sources of stress and using relaxation techniques before driving**

**reduces crash risk.**

**ANSWER: TRUE | Page: Module 7 / Section 7.1**

**Q143. (MC) Driving while fatigued is compared to driving with a BAC of:**

- A) 0.02%
- B) 0.04%
- C) 0.08% or more
- D) 0.15%

**ANSWER: C | Page: Module 7 / Section 7.2**

**Q144. (TF) Microsleeps ? brief uncontrolled sleep episodes ? can occur behind the wheel**

**without the driver's awareness.**

**ANSWER: TRUE | Page: Module 7 / Section 7.2**

**Q145. (MC) The most effective countermeasure for severe fatigue while driving is:**

- A) Drinking coffee
- B) Rolling down the windows
- C) Pulling over safely and sleeping (even a 20-minute nap)
- D) Turning up the radio

**ANSWER: C | Page: Module 7 / Section 7.2**

**Q146. (TF) Emotional distress (anger, grief, excitement) impairs driving to a comparable**

degree as physical distractions.

**ANSWER: TRUE | Page: Module 7 / Section 7.3**

**Q147. (MC) A driver experiencing road rage should:**

- A) Respond to being cut off and defend their space
- B) Focus on the other driver's behavior
- C) Remain calm, avoid eye contact with the aggressive driver, and report if necessary
- D) Speed away from the situation

**ANSWER: C | Page: Module 7 / Section 7.3**

**Q148. (TF) An appropriate attitude for a driver includes respecting the rights of others on the road.**

**ANSWER: TRUE | Page: Module 7 / Section 7.4**

**Q149. (MC) Which is NOT a sign of driver fatigue?**

- A) Heavy eyelids
- B) Drifting between lanes
- C) Hyperawareness of surroundings
- D) Missing turns or exits

**ANSWER: C | Page: Module 7 / Section 7.2**

**Q150. (MC) A driver who races to beat a yellow light, tailgates, and makes gestures at other drivers is exhibiting:**

- A) Defensive driving
- B) Assertive driving
- C) Aggressive driving/road rage
- D) Normal competitive behavior

**ANSWER: C | Page: Module 7 / Section 7.3**

**Q151. (TF) High emotional arousal (excitement, anger) narrows a driver's attention in much the same way alcohol does.**

**ANSWER: TRUE | Page: Module 7 / Section 7.3**

**Q152. (MC) Which strategy best helps manage emotional distress before driving?**

- A) Rush to the destination quickly
- B) Take several deep breaths and wait until calmer
- C) Drive faster to "work it off"
- D) Blast music loudly

**ANSWER: B | Page: Module 7 / Section 7.3**

**Q153. (TF) New drivers and teenagers are especially susceptible to fatigue because their sleep needs are greater.**

**ANSWER: TRUE | Page: Module 7 / Section 7.2**

**Q154. (MC) A driver with an "appropriate attitude" toward driving would:**

- A) Always assume they have the right of way
- B) Treat traffic laws as suggestions
- C) Be patient, humble, and predictable
- D) Drive aggressively to reach the destination faster

**ANSWER: C | Page: Module 7 / Section 7.4**

**Q155. (TF) Planning your route before driving reduces stress that can lead to aggressive driving.**

**ANSWER: TRUE | Page: Module 7 / Section 7.1**

## MODULE 8 / TOPIC 9: FLORIDA TRAFFIC LAWS (Questions 156-215)

**Q156. (MC) How many points are added to a Florida license for a speeding violation of 15 mph or less over the limit?**

A) 2 B) 3 C) 4 D) 6

ANSWER: B | Page: Module 8 / Section 8.1

**Q157. (TF) Accumulating 24 points within 36 months results in a 1-year Florida license suspension.**

ANSWER: TRUE | Page: Module 8 / Section 8.1

**Q158. (MC) A "revocation" of a Florida driver license means:**

- A) Temporary suspension for 30 days
- B) The license is permanently terminated and reapplication is required
- C) The license is downgraded
- D) Only commercial driving is restricted

ANSWER: B | Page: Module 8 / Section 8.1

**Q159. (MC) Reckless driving that results in an accident adds how many points?**

A) 3 B) 4 C) 6 D) 8

ANSWER: C | Page: Module 8 / Section 8.1

**Q160. (TF) A driver can be designated a Habitual Traffic Offender (HTO) for accumulating severe violations within a 5-year period.**

ANSWER: TRUE | Page: Module 8 / Section 8.1

**Q161. (MC) What is the default speed limit in Florida residential areas where no sign is posted?**

A) 25 mph B) 30 mph C) 35 mph D) 40 mph

ANSWER: B | Page: Module 8 / Section 8.2

**Q162. (TF) A flashing yellow light means you must stop completely before proceeding.**

ANSWER: FALSE ? flashing yellow means proceed with caution | Page: Module 8 / Section 8.3

**Q163. (MC) A solid double yellow centerline on a road indicates:**

- A) Passing is permitted when safe
- B) A divided highway
- C) Passing is prohibited
- D) The road is closed ahead

ANSWER: C | Page: Module 8 / Section 8.3

**Q164. (TF) You may turn right on a red light in Florida after a complete stop, unless prohibited by a sign.**

ANSWER: TRUE | Page: Module 8 / Section 8.3

**Q165. (MC) On an undivided road, when a school bus stops with flashing red lights and extends the stop arm, drivers in BOTH directions must:**

- A) Slow to 15 mph
- B) Stop completely
- C) Yield and proceed with caution

ANSWER: B | Page: Module 8 / Section 8.4

**Q166. (TF) Under Florida's Move Over law, if a lane change is not safely possible near a stationary emergency vehicle, you must slow to 20 mph below the posted speed limit.**

ANSWER: TRUE | Page: Module 8 / Section 8.5

**Q167. (MC) Required vehicle safety equipment in Florida includes all of the following EXCEPT:**

- A) Functioning headlights
- B) A dashcam
- C) Working brakes
- D) Windshield wipers

ANSWER: B | Page: Module 8 / Section 8.6

**Q168. (TF) Drivers must use headlights when windshield wipers are in use in Florida.**

ANSWER: TRUE | Page: Module 8 / Section 8.6

**Q169. (MC) The penalty for passing a stopped school bus in Florida on a first offense is:**

- A) Warning only B) At least \$200 fine and 4 points C) License revocation D) \$50 fine

**ANSWER: B | Page: Module 8 / Section 8.4**

**Q170. (TF) License cancellation differs from suspension ? a cancelled license was issued in error or through fraud.**

**ANSWER: TRUE | Page: Module 8 / Section 8.1**

**Q171. (MC) What does a white solid edge line on the right side of the road mark?**

- A) A bike lane B) The right edge of the traveled roadway C) A no-parking zone  
D) A bus lane

**ANSWER: B | Page: Module 8 / Section 8.3**

**Q172. (TF) When traffic signals malfunction completely, you should treat the intersection as a four-way stop.**

**ANSWER: TRUE | Page: Module 8 / Section 8.3**

**Q173. (MC) In Florida, the default speed limit on rural state roads (where not otherwise posted) is:**

- A) 55 mph B) 60 mph C) 65 mph D) 70 mph

**ANSWER: C | Page: Module 8 / Section 8.2**

**Q174. (TF) An emergency vehicle approaching with lights and siren requires you to pull to the right and stop.**

**ANSWER: TRUE | Page: Module 8 / Section 8.5**

**Q175. (MC) Following an emergency vehicle responding to a call within 500 feet is:**

- A) Permitted B) Illegal in Florida C) Only illegal on highways D) Only illegal at night

**ANSWER: B | Page: Module 8 / Section 8.5**

#### GENERAL / CROSS-TOPIC QUESTIONS (Questions 176-215)

**Q176. (TF) Florida's BDI course is approved pursuant to Section 318.1451, Florida Statutes.**

**ANSWER: TRUE | Page: Module 1 / Introduction**

**Q177. (MC) A driver who is found guilty of four traffic violations in a 12-month period:**

- A) Loses their license automatically  
B) Must take a BDI course or face point accumulation penalties

**ANSWER: B | Page: Module 8 / Section 8.1**

**Q178. (TF) Road rage incidents can lead to criminal charges under Florida law.**

**ANSWER: TRUE | Page: Module 7 / Section 7.3**

**Q179. (MC) Hands-free use of a cell phone while driving:**

- A) Eliminates all distraction B) Eliminates manual distraction but cognitive distraction remains  
C) Is illegal in Florida D) Is as safe as not using a phone at all

**ANSWER: B | Page: Module 1 / Section 1.2**

**Q180. (TF) The 500-question bank for the BDI final exam ensures that every student receives**

a unique set of 40 randomly selected questions.

**ANSWER: TRUE** | Page: Part One / Section E

**Q181. (MC) A "primary enforcement" seat belt law allows police to:**

- A) Issue citations only if another violation occurred
- B) Stop and cite drivers solely for not wearing a belt
- C) Reduce fines for unbelted drivers
- D) Only warn unbelted drivers

**ANSWER: B** | Page: Module 6 / Section 6.1

**Q182. (TF) Vehicle maintenance is a legal obligation under Florida Statutes Chapter 316, Part III.**

**ANSWER: TRUE** | Page: Module 8 / Section 8.6

**Q183. (MC) The safest action when you feel extremely drowsy while driving a long distance is:**

- A) Speed up to end the trip quickly
- B) Have a passenger take over or pull over to sleep
- C) Roll down the windows and sing
- D) Drink an energy drink and keep driving

**ANSWER: B** | Page: Module 7 / Section 7.2

**Q184. (TF) All traffic statistics cited in this BDI course are based on the most recent available**

Florida and U.S. data.

**ANSWER: TRUE** | Page: Module 1 / Section 1.1

**Q185. (MC) Which of the following correctly defines "hydroplaning"?**

- A) A plane landing on water
- B) Water building under tires causing loss of road contact
- C) A vehicle sliding on ice
- D) Tire overheating in summer

**ANSWER: B** | Page: Module 3 / Section 3.3

**Q186. (TF) You should never attempt to pass on a hill where oncoming traffic cannot be seen.**

**ANSWER: TRUE** | Page: Module 3 / Section 3.2

**Q187. (MC) Which Florida statute governs the disposition of traffic infractions and the**

BDI program?

- A) Chapter 316
- B) Chapter 318.1451
- C) Chapter 322
- D) Chapter 15A-8

**ANSWER: B** | Page: Module 1 / Introduction

**Q188. (TF) A driver who is required by a court to complete BDI may take the course online**

through an approved provider.

**ANSWER: TRUE** | Page: Module 1 / Introduction

**Q189. (MC) The Florida point system is designed to:**

- A) Generate revenue for the state
- B) Track driving behavior and progressively penalize repeat violators
- C) Reward good drivers with lower taxes
- D) Replace criminal court for traffic violations

**ANSWER: B** | Page: Module 8 / Section 8.1

**Q190. (TF) Over-inflating tires is as dangerous as under-inflating because it reduces traction.**

**ANSWER: TRUE** | Page: Module 6 / Section 6.5

**Q191. (MC) When two vehicles arrive at a four-way stop simultaneously, the right of way goes to:**

- A) The larger vehicle
- B) The vehicle on the left
- C) The vehicle on the right
- D) Whoever moves first

**ANSWER: C** | Page: Module 3 / Section 3.7

**Q192. (TF) Bike lanes in Florida may not be used by motor vehicles except when turning,**

accessing a driveway, or avoiding a hazard.

ANSWER: TRUE | Page: Module 4 / Section 4.3

**Q193. (MC) Which of the following best describes "defensive driving"?**

- A) Driving aggressively to stay ahead of other drivers
- B) Obeying only the traffic laws you agree with
- C) Anticipating hazards and being prepared to react safely before a crash occurs
- D) Driving as fast as your car allows

ANSWER: C | Page: Module 3 / Section 3.1

**Q194. (TF) It is possible to be charged with DUI in Florida for driving under the influence of prescription drugs.**

ANSWER: TRUE | Page: Module 5 / Section 5.1

**Q195. (MC) The two primary consequences of running a red light in Florida are:**

- A) A verbal warning and traffic school
- B) A moving violation with points AND potential crash
- C) Only an insurance notification
- D) Community service only

ANSWER: B | Page: Module 8 / Section 8.3

**Q196. (TF) Drivers in Florida are legally required to maintain their vehicles in safe operating condition.**

ANSWER: TRUE | Page: Module 8 / Section 8.6

**Q197. (MC) Which of the following describes an "ignition interlock device"?**

- A) A GPS tracker
- B) A breath-test device wired to the ignition that prevents a car from starting if alcohol is detected
- C) A speed limiter
- D) A tire pressure monitor

ANSWER: B | Page: Module 5 / Section 5.3

**Q198. (TF) All children under 13 should be seated in the rear seat of a vehicle when possible.**

ANSWER: TRUE (especially important with airbags in front seat) | Page: Module 6 / Section 6.4

### **CERTIFICATION AND SUBMISSION STATEMENT**

I, Jordan Lovelace, Course Director of Quick Pass Traffic School, certify that:

1. The course curriculum contained in this document is Florida-specific and meets all requirements of Section 318.1451, Florida Statutes and Chapter 15A-8, F.A.C.
2. All statistics cited are from the most recently available data sources published by FLHSMV, FDOT, NHTSA, CDC, and AAA.
3. This document represents the complete resubmission responsive to the Department's review dated April 27, 2026 (Reference: QPTSBDInt27April2026Rp).
4. The course script addresses all criteria rated "Unacceptable" in the Department's review.
5. This hard copy is submitted with sequential page numbers as required.
6. Upon Department approval of this script, Quick Pass Traffic School will:
  - a. Develop the technology demonstration with the approved script and question bank.
  - b. Provide the Department with full course access for the curriculum review committee.
  - c. Make all additional corrections required by the committee.
